Sustainable Building Design Guidelines:

Sustainable Building Standards and Guidelines for Mixed-Use Buildings Ranjit Gunewardane, 2018-09-29 With increasing numbers of consumers becoming more environmentally conscious in their purchasing behavior environmental practices are a decisive factor in the real estate sector Reconciling the seemingly opposing goals of improving the environment and providing the needed infrastructure to support economic growth is the origin of the sustainable green building concept This concept is simply about being mindful of the potential impact that the design construction and operation of commercial buildings will have on the environment and devising innovative strategies to mitigate or eliminate these impacts This means changing the traditional process of designing buildings and their construction and operation as well as the integration of emerging trends in many technology fields into buildings The Sustainability Building Standards and Guidelines contains information intended as minimum standards for designing constructing and equipping sustainable mixed use buildings Insofar as practical these standards relate to desired performance or results or both Sustainable green buildings are as much about construction as they are about design The book includes a description of the special design features construction processes the systems of operation and maintenance and the interrelationships of these various functions Increasingly staying competitive means building owners property developers designers manufacturers and contractors are focused on achieving increasingly environmentally friendly and energy efficient buildings with the ultimate goal of producing environmentally and energy neutral buildings

Fundamentals of Integrated Design for Sustainable Building Marian Keeler, Prasad

Vaidya,2016-04-08 The Fully Updated Indispensible Study of Sustainable Design Principles Fundamentals of Integrated Design for Sustainable Building is the first textbook to merge principles theory and practice into an integrated workflow This book introduces the technologies and processes of sustainable design and shows how to incorporate sustainable concepts at every design stage This comprehensive primer takes an active learning approach that keeps students engaged This book dispenses essential information from practicing industry specialists to provide a comprehensive introduction to the future of design This new second edition includes Expansive knowledge from history and philosophy to technology and practice Fully updated international codes like the CAL code and current legislations Up to date global practices such as the tools used for Life Cycle Assessment Thorough coverage of critical issues such as climate change resiliency health and net zero energy building Extensive design problems research exercise study questions team projects and discussion questions that get students truly involved with the material Sustainable design is a responsible forward thinking method for building the best structure possible in the most efficient way Conventional resources are depleting and building professionals are thinking farther ahead This means that sustainable design will eventually be the new standard and everyone in the field must be familiar with the concepts to stay relevant Fundamentals of Integrated Design for Sustainable Building is the ideal primer with complete coverage of the most up to date information Understanding Green Building Guidelines: For Students and Young Professionals Traci Rose Rider,2010-02-17 Summarizes the main issues and strategies of the forceful and fast paced green building movement Many professions are increasingly producing tools to assist clients in breaking down and understanding the different elements that reside under the umbrella of the sustainability movement For the design and construction professions this unpacking often takes the form of green building guidelines and rating systems This book aims to look at a selection of both national and local green building rating systems and guidelines ranging from commercial to residential While the goal is to provide students and young professionals with a solid overview of each product enabling them to understand the differences and select the most appropriate system for their chosen projects the book provides valuable overviews and comparisons for anyone interested in better buildings designers homeowners realtors contractors facility managers site designers and more *Guideline for sustainable, energy efficient architecture and construction* Rückert, Klaus,Shahriari, Effatolsadat,2014-07-22 Nowadays there is an ever growing awareness regarding inevitable importance of sustainable development and its sub topics such as environment protection ecology resource saving energy efficiency etc Due to massive and rapid development in recent years this topic is getting more crucial in developing countries for instance Iran It is getting more obvious that most of the development activities in absence of precise analysis of current conditions as well as consequences of such activities will lead to devastation of natural resources The resources that is essential for further development of the country Therefore It is necessary to deal with sustainable development and environmental issues from the broader perspective where includes items underlying immediate causes of environmental impact and at the same time

tries to improve them Sustainability or sustainable development is an umbrella covering many issues and aspects among them energy which is the key item because energy consumption of buildings could have an impact on environment more than other aspects Considering the huge portion of energy consumption in construction industry and housing sector paying special attention to improvements in this sector is essential Following this goal the aim of this publication is to highlight procedures and practices which promote sustainable construction that is about creating a better quality of building and more healthy places to live in Procedure of sustainable design includes various approaches and methods to develop energy efficient and environmentally sensitive buildings Such approaches and methods demonstrate how to design develop and construct all buildings in general and residential buildings in particular Among various approaches towards sustainability Passive solar strategies are well known thanks to their cost efficiency and context friendliness of its principals and measures The approach of passive design architectural strategies could be considered as the most applicable approach for resource saving and sustainability thinking about special situation of Iran in particular and the Mena region in general Such an approach requires paying special attention to climate social characteristics of current or prospective inhabitants topographical physical characteristics as well as architectural characteristics of the understudied area The relationships and interactions among society building and its architecture and climate is Site specific and dynamic Therefore they should be studied and properly analyzed throughout a specific project process for each certain place The most expecting outcomes are precise definitions of passive design strategies generally for buildings in MENA Region and especially for Iran This publication is prepared in the young cities project framework as the reasonable outcome of the developed pilot projects The book starts with introducing the target group related definitions and a brief overview on a conventional approach and its impact on environment This chapter ends up with a brief review on benefits of applying sustainable guidelines As the next step after analyzing the climate and its relationship with thermal comfort and building the main principals of passive solar design are introduced The selected principles are orientation day lighting shading thermal mass insulation and ventilation After a brief introduction of the principals each one is explained in detail through its general principles and design strategies Sustainable construction is examined based on its main pillars construction systems building elements ecological building materials and applicable measures for building physic Construction systems are sorted out in six main groups as block work brick infill block work lightweight block infill conventional panels light weight steel frame tunnel form structural system and precast modular All selected systems are introduced based on following factors brief description of the building concept factory production insulation wastage finishes labor installation transport lifting services hydronic cooling heating and safety Then main building elements are examined Here the elements are limited to foundations walls floors roofs doors and windows After a short description different types of each element are introduced Ecological building materials are investigated in chapter four To find a base to compare several common criteria are selected such as embodied energy pollution and waste local

production reusability and recyclability durability and interdependency Applicable measures for building physics are examined in chapter five The selected main measures are as follows insulation glazing thermal mass day lighting shading ventilation and air tightness After describing the general principles of each measure several recommendations in frame of design considerations are provided Die enorme Bedeutung nachhaltiger Projekte wie Umweltschutz ökologie sparsamer Umgang mit Rohstoffen Energieeffizienz usw dringt immer stärker in unser Bewusstsein Aufgrund der massiven und rasanten Entwicklung in den Schwellenländern z B Iran gewinnen Umweltschutz und Nachhaltigkeit immer mehr an Relevanz Ein einseitiges Wirtschaftswachstum ohne Berücksichtigung ökologischer und klimatischer Bedingungen verursacht die Zerstörung der Umwelt und Rohstoffe Ressourcen die für die weitere Entwicklung der Länder unverzichtbar sind Es ist unumgänglich sich umfassend mit nachhaltiger Entwicklung und ökologischen Aspekten auseinanderzusetzen die unmittelbaren Auswirkungen auf die Umwelt zu erfassen und gleichzeitig Möglichkeiten einer Optimierung aufzuzeigen Nachhaltigkeit und Umweltschutz erfassen eine Vielzahl von Themen und Aspekten und der Energieverbrauch ein wesentlicher Faktor da der Energieverbrauch in Gebäuden den größten Einfluss auf die Umweltbilanz hat In Anbetracht des enormen Energieverbrauchs in Bauwirtschaft und Wohnungsbau ist es unerlässlich gerade in diesem Bereich eine Optimierung in der weiteren Entwicklung zu verfolgen Diesem Ziel folgend werden in dieser Publikation Verfahren und Methoden für nachhaltige Bauweisen unter Berücksichtigung einer besseren Bauqualität und gesundheitlicher Aspekte erläutert Die Maßnahmen nachhaltigen Designs beinhalten verschiedene Ansätze und Methoden energieeffiziente und umweltfreundliche Gebäude zu entwickeln Sie zeigen Entwurf Konstruktion und bauliche Ausführung von Gebäuden im Allgemeinen und Wohngebäuden im speziellen Neben den verschiedenen Ansätzen sind die passive solar strategies die wohl namhaftesten Methoden da diese sehr rentabel und daher für Bauherren attraktiv sind Angesichts der speziellen Situation im Iran im Besonderen und der MENA Region im Allgemeinen könnten die passiven Design Architektur Strategien als eine der am besten anzuwendenden Methoden für Rohstoffeffizienz und Nachhaltigkeit betrachtet werden Dies setzt eine besondere Berücksichtigung des dortigen Klimas der sozialen Charakteristiken derzeitiger oder zukünftiger Einwohner als auch der topographisch physischen und architektonischen Charakteristiken der betroffenen Region voraus Beeinflussung und Beziehungen zwischen Gesellschaft Gebäuden Architektur und Klima sind lokal spezifisch und dynamisch Deshalb sollten diese Faktoren für jeden Standort neu geprüft und analysiert werden Die Resultate dieser Analysen allgemein für Gebäude in der MENA Region und im Besonderen im Iran zeigen deutlich die Überlegenheit von passiven Designstrategien Diese Publikation ist das Resultat der entwickelten Pilotprojekte im Rahmen des Young Cities Projektes Sie beginnt mit der Vorstellung der Zielgruppe relevanten Definitionen und einem kurzen Überblick des konventionellen Ansatzes und dessen Einfluss auf die Umwelt Das Kapitel endet mit einem kurzen Rückblick über den Nutzen nachhaltiger Bauweise Nach Analyse des Klimas und seine Beziehung zu thermischem Komfort und Gebäuden werden die wichtigsten Prinzipien passiver Solarenergie vorgestellt Orientierung Tageslicht Schatten thermale Masse
