Hoffmann, 2002-08-23 How hydrogen nonpolluting and easy to produce could become the fuel of the future Hydrogen is the quintessential eco fuel This invisible tasteless gas is the most abundant element in the universe It is the basic building block and fuel of stars and an essential raw material in innumerable biological and chemical processes As a completely nonpolluting fuel it may hold the answer to growing environmental concerns about atmospheric accumulation of carbon dioxide and the resultant Greenhouse Effect In this book Peter Hoffmann describes current research toward a hydrogen based economy He presents the history of hydrogen energy and discusses the environmental dangers of continued dependence on fossil fuels Hydrogen is not an energy source but a carrier that like electricity must be manufactured Today hydrogen is manufactured by decarbonizing fossil fuels In the future it will be derived from water and solar energy and perhaps from cleaner versions of nuclear energy Because it can be made by a variety of methods Hoffmann argues it can be easily adapted by different countries and economies Hoffmann acknowledges the social political and economic difficulties in replacing current energy systems with an entirely new one Although the process of converting to a hydrogen based economy would be complex he demonstrates that the environmental and health benefits would far outweigh the costs **2025** □□□□ □
