Beliso-De Jesús, Jemima Pierre, Junaid Rana, 2025-01-28 White supremacy has shaped cultural anthropology from its inception yet the discipline also offers powerful tools for understanding how this corrosive force structures societies around the world

The Anthropology of White Supremacy explores how this phenomenon works around the globe and within anthropology itself. Gathering original essays from a diverse international group of anthropologists, this collection illustrates that white supremacy far from being only a fringe belief of white nationalists and fascists is a core mainstream ideology. The book includes essays about many countries including Brazil, Mexico, Nigeria, Norway, Senegal, South Africa, and the United States, and takes up such topics as American advertising, the Belgian Congo, South Asian philosophies, police cadets, U.S. immigration courts, Guantanamo memoirs, Palestinian feminism, Hollywood paparazzi, and how Indigenous anthropologists can counter the damage of settler colonialism. The result reveals not only how anthropology can help us to better comprehend white supremacy but also how the discipline can help us begin to dismantle it. Biological Anthropology and Prehistory Patricia C. Rice, Norah Moloney, 2016-12-05. Written specifically for courses that cover biological anthropology and archaeology, this superbly illustrated new text offers the most balanced and up-to-date introduction to our human past. Devoting equal time to biological anthropology and prehistory, this text exposes students to the many sides of major controversial issues involving students in the scientific thought process by allowing them to draw their own conclusions. Amidst discussions of bones and artifacts, the text maintains a focus on people, demonstrating to students how biological anthropology and archaeology apply to their lives today. Featuring the latest research and findings pulled from the original sources, this new text is far and away the most up-to-date text available. In addition, the superior art program features hundreds of photographs and figures, and the multimedia presentation options include documentary film clips and lecture launcher videos. Pat Rice, a recipient of AAA's Outstanding Teacher Award and past president of the General Anthropology Division of AAA, and Norah Moloney, an experienced professor and active archaeologist, present the material in a clear, refreshing, and straightforward writing style.

Applying Anthropology to General Education Jennifer R. Wies, Hillary J. Haldane, 2022-03-31. The current higher education policy and practice landscape is simultaneously marked by uncertainty and hope, and nowhere are these tensions more present than in discussions and actions around general education. This volume uses an anthropological approach to contemplate ways of reimagining general education for the 21st century and how faculty, teachers, administrators, and others can transform the educational endeavor to be holistic, comprehensive, and aligned with the needs of people and the planet in the decades to come. Included are analyses of general education concepts such as diversity, case studies of general education, and connecting curricula, opportunities for faculty development, unique general education student populations, assessment strategies, and philosophical/pedagogical challenges. Contributors make the case that far from receding from a central role in higher

education there is a need to strengthen general education curricula as key to the educational needs of students for the skills and competencies they require in the workplace and for civic engagement

Racial Segregation and Eugenical Science Between the Wars Michael L. Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies

Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology's history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizzio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit **Anthropology and Slavery at the Dawn of White Supremacy** Michael L. Blakey, 2025-07-18 This volume examines biological and cultural data that debunk a primordial basis for racism It tracks the ancient history of all social inequity to agricultural and feudal societies The book then focuses on social and ideological developments in European societies associated with religious justifications for the enslavement of others The European Enlightenment built upon those prejudices with ideas about nature and acceptable natural causes of unequal social status for people newly classified into biological races Nineteenth century anthropology is critiqued by African diasporic scholars who

are the first Americans to argue that nurture rather than nature is responsible for human variation The American Civil War brought slavery nearly to an end but racist science continued to grow as eugenics applied to justify otherwise unjustifiable structures of human inequality such as Jim Crow segregation as though they are morally sound In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies
