

Faraday's Electromagnetic Lab II: Pickup Coil, Transformer, and Generator

Answer the following questions on a separate sheet. The sim is available at phet.colorado.edu.

Part A: Pickup Coil

1. Run the PHET sim, "Faraday's Electromagnetic Lab." Maximize the window. Click the Pickup Coil tab. You should see a bar magnet, a compass needle grid, and a coil attached to a light bulb.

2. Describe the most effective way of using the magnet and the coil to light the bulb if

a. the coil cannot be moved.

b. the magnet cannot be moved.

3. Rank the arrangements and motions shown below from most effective to least effective in terms of lighting the bulb, allowing for ties. For example, if A were most effective, B were least effective, and C and D were equivalent to one another, the ranking would be A > C = D > B.

4. Move the bar magnet through the coil and observe the motion of the electrons in the forward arc of the coil loops. Report the correlations of magnet motion and electron motion.

a. Magnet approaches from the left, south pole first; electrons move downward.

b. Magnet departs to the right, north end last; electrons move upward.

a. Magnet approaches from the right, south pole first; electrons move ____.

b. Magnet departs to the left, north end last; electrons move ____.

chapter *Introduction to Understandable Physics* Will Winn, 2010-07 Will Winn has written *Introduction to Understandable Physics* with the goal of presenting physics in a building block fashion Accordingly Volume I Electricity Magnetism and Light requires a knowledge of Volume I Mechanics and Volume II Matter Heat and Waves Volume III begins with a study of electric charges their electric fields forces and subsequently their motion as electric currents These currents are shown to produce magnetic fields forces where electromagnets are studied as models for understanding permanent magnets Next The reverse process where magnetic fields produce current is examined and applied for generating electricity AC and DC circuits exemplify further applications Finally electric and magnetic fields are found to produce electromagnetic waves that move at the speed of light The study of light begins with historical measurements of its speed and then examines its electromagnetic power intensity light spectra human response and color perception Next light reflection and refraction are applied to mirrors lenses rainbows eyeglasses telescopes and microscopes Subsequently The text examines the wave nature of light As exhibited by its diffraction and interference phenomena Furthermore when the electric field amplitudes of waves are oriented along one dimension light is polarized Polaroids filter out such glaring light when used in sunglasses Finally various light experiments provided early clues for discovering relativity and quantum mechanics which are examined in Volume IV Near the end of each chapter a Simple Projects section suggests experiments and or field trips that can reinforce the physics covered Some experiments are simple enough for students to explore alone while others benefit from equipment available to physics instructors Also optional text sections provide students with a deeper appreciation of the subject matter however these are not required for continuity Some of these optional topics can be candidates for term projects

[Experiment and the Making of Meaning](#) D.C. Gooding,2012-12-06 the topic of meaning is the one topic discussed in philosophy in which there is literally nothing but theory literally nothing that can be labelled or even ridiculed as the common sense view Putnam The Meaning of Meaning This book explores some truths behind the truism that experimentation is a hallmark of scientific activity Scientists descriptions of nature result from two sorts of encounter they interact with each other and with nature Philosophy of science has by and large failed to give an account of either sort of interaction Philosophers typically imagine that scientists observe theorize and experiment in order to produce general knowledge of natural laws knowledge which can be applied to generate new theories and technologies This view bifurcates the scientist s

world into an empirical world of pre articulate experience and know how and another world of talk thought and argument Most received philosophies of science focus so exclusively on the literary world of representations that they cannot begin to address the philosophical problems arising from the interaction of these worlds empirical access as a source of knowledge meaning and reference and of course realism This has placed the epistemological burden entirely on the predictive role of experiment because it is argued testing predictions is all that could show that scientists theorizing is constrained by nature Here a purely literary approach contributes to its own demise The epistemological significance of experiment turns out to be a theoretical matter cruciality depends on argument not experiment **Resources in Education** ,1980-06 *Catalogue*
