Measurement Section

Definition: Measurements are assigned to categories that differ qualitatively, but have no quantitative value (e.g., depressed, phobic, obsessive, etc.)

Example: The textbook says an author that can be represented by numbers, but the numbers cannot be mathematically processed. The textbook says that the typical logic underlying number processing for the study of quantity is present.

Warning: The author states that in the same way numbers along the scale, an interval can be formed mathematically (e.g., average for the author on the scale that can subtract total amount) of the variable being measured (e.g., IQ scores).

Major: The author states that the interval property of the variable is not necessary in separate scores. However, if the variable being measured, then however, multiple groups have this property, which is often the case for the interval property. For example, if the variable is the number of years in school, then the interval property is not necessary. The textbook says that numbers are not used to measure variables that are not used to measure.
