insightful discussion and detailed references      **Testing the Data Warehouse Practicum** Wayne Yadow Doug Vucevic &, 2012-08 The quality of a data warehouse DWH is the elusive aspect of it not because it is hard to achieve once we agree what it is but because it is difficult to describe We propose the notion that quality is not an attribute or a feature that a product has to possess but rather a relationship between that product and each and every stakeholder More specifically the relationship between the software quality and the organization that produces the products is explored Quality of data that populates the DWH is the main concern of the book therefore we propose a definition for data quality as fitness to serve each and every purpose Methods are proposed throughout the book to help readers achieve data warehouse quality

*Software Technologies for Embedded and Ubiquitous Systems* Tony Givargis, Stefano Russo, 2008-09-25 Embedded and ubiquitous computing systems have considerably increased their scope of application over the past few years and they now also include mission and business critical scenarios. The advances call for a variety of compelling issues including dependability, real time quality of service, autonomy, resource constraints, seamless interaction, middleware support, modeling, verification, validation, etc. The International Workshop on Software Technologies for Future Embedded and Ubiquitous Systems (SEUS) brings together experts in the field of embedded and ubiquitous computing systems with the aim of exchanging ideas and advancing the state of the art about the above mentioned issues. I was honored to chair the sixth edition of the workshop which continued the tradition of past editions with high quality research results. I was particularly pleased to host the workshop in the wonderful scenario of Capri with its stunning views and traditions. The workshop started in 2003 as an IEEE event and then in 2007 it became a flagship event of the IFIP Working Group 10.2 on embedded systems. The last few editions held in Hakodate Japan, Vienna Austria, Seattle USA, Gyeongju Korea and Santorini Greece were co-located with the IEEE International Symposium on Object Component Service Oriented Real Time Distributed Computing (ISORC). This year SEUS was held as a stand-alone event for the first time and despite the additional organizational difficulties it resulted in a high quality event with papers from four continents from USA, Europe, East Asia and Australia co-authored and presented from senior scientists coming from academia or leading industrial research centers.
