

While personal independence and empowerment of the individual are both important, this article is in line with the approach of [Kawachi and Berkman's Social Architecture](#) and [the effectiveness of social support](#) in the workplace. Abstract: *Staphylococcus aureus* (S. aureus) is a gram-positive bacterium that is a common cause of skin and soft tissue infections. It is also a leading cause of hospital-acquired infections. The bacterium is characterized by its ability to form a biofilm, which allows it to adhere to surfaces and resist antimicrobial treatment. This review discusses the epidemiology, pathogenesis, and treatment of S. aureus infections, with a focus on the role of biofilms in drug resistance.
