Sampling and Sample Preparation Markus Stoeppler,2012-12-06 The significant progress achieved in modern instrumental analysis has led to a continuous lowering of detection limits and improved precision This should in principle permit the reliable and extremely precise analysis of trace compounds mainly trace elements at levels down to the lowest natural concentrations However the frequently observed very high discrepancies between the analytical results of different laboratories as well as the deviations from true values are regrettably still common in analytical practice Basic methodological errors at the determination step can usually be minimized or even avoided by carefully performed quality control measures e g by interlaboratory comparisons and the proper use of certified reference materials The most severe and often underestimated error sources however are those connected with the whole and often extremely complex sampling process and also to a lesser extent with sample preparation prior to analysis Thus for these initial steps of an analytical procedure particular experience is needed as well as a detailed knowledge of the interrelations between these steps which always have to be applied with the utmost care In collaboration with a number of very experienced colleagues working in different research areas the editor of this understanding of these particular error sources and how they can be overcome in a series of training courses held during the last decade at the Haus der Technik Essen Germany
