Installation Procedure

This product is compatible with most Directed Electronics Security, Remote Start and hybrid systems that are ESP2 compatible (3 or 4-pin). It is also compatible with Astrostart, AutoStart and Xpresskit products. Non-compatible systems include 30011, and older AM1/AMS models.

Please read the following before proceeding:

1. Customer Information required:
 - Record the customer information requested in step 4a of this procedure. The module ID # is provided on a sticker which can be affixed to the space provided in step 4a. This information is required for final verification/activation of the module.
2. Installation Points:
 - Install and test the security/remote start system first using the associated guides and wiring diagrams. If using an existing system, verify it is fully functional before installing the Directed SmartStart module.
 - For 3000-series or standalone SmartStart systems with no remote control, test the installed system via the SmartStart activation panel.
 - Mount the SmartStart module as high as possible in the vehicle (the engraved side faces up for GPS devices). Mount with minimal obstructions that can affect communications and within reach of the main Directed system using the provided cables (do not extend).

The module's signal strength (RSSI) can be viewed in the activation panel after a successful transmission test.

-50 to -90 dB - good signal strength
 -91 to -100 dB - borderline/inconsistent signal strength
 > -100 dB - weak, insufficient signal strength

- DO NOT connect the SmartStart module until the final programming of the Remote Start main unit and verification of security/remote start system operations are completed.

CAUTIONS

The white plug is **ONLY** for RSR (Remote Start Ready) and RST applications using certain Xpresskit interfaces (go to www.xpresskit.com for details on supported devices & vehicles).

For systems with combined 4-pin ESP/D2D ports, you **CANNOT** use an interface module in D2D mode when using a SmartStart module. You must use W2W on the bypass module.

DO NOT connect the black 3-pin ESP connector to white Door Lock port on Directed systems.

There should **NEVER** be more than one data plug connected from the 3-way harness.

3. Install the module using the information in the wiring diagram and steps found on the next page (Note CAUTIONS during installation).
 - a. Configuration Wires: Connect the loose gray or white configuration wire(s) to match the desired application (see table below).

MODE	GRAY WIRE	WHITE WIRE
ESP2	Open	Open
D2D, RSR/RST	GND	Open
Astrostart/AutoStart	Open	GND

- b. Connect the serial data cable and adapter to the correct port of the main module. For D2D/RSR/RST applications, connect the serial data cable and adapter to Xpresskit module.
- c. Complete the main power connections (if required).
- d. When power is connected, the module begins an initialization procedure that may take several minutes. During this procedure, progress is reported via the flashing Amber/Green LEDs (ESP2 and D2D) next to the module cable. When both LEDs turn on solid, the initialization procedure is completed (See Status LEDs for a description of the various LED states).
