DNA, RNA, and Snorks

Introduction: In this simulation, you will examine the DNA sequence of a fictitious organism - the Snork. Snorks were discovered on the planet Dee Enae in a distant solar system. Snorks only have one chromosome with eight genes on it. Your job is to analyze the genes of its DNA and determine what traits the organism has and then sketch the organism (You can be creative here).

For simplicity, the gene sequences are much smaller than -real- gene sequences found in living organisms. Each gene has two versions that result in a different trait being expressed in the snork. You can find the amino acid sequences and traits in the table below.

| Genes | Amino Acid Sequence | Description |
|------------------------|------------------------------------|--------------------------|
| Gene 1 - body covering | val - ser - leu | hairless |
