Thompson, 2020-02-25 Develop a comprehensive plan for building a HIPAA compliant security operations center designed to detect and respond to an increasing number of healthcare data breaches and events Using risk analysis assessment and management data combined with knowledge of cybersecurity program maturity this book gives you the tools you need to operationalize threat intelligence vulnerability management

security monitoring and incident response processes to effectively meet the challenges presented by healthcare's current threats. Healthcare entities are bombarded with data. Threat intelligence feeds, news updates, and messages come rapidly and in many forms such as email, podcasts, and more. New vulnerabilities are found every day in applications, operating systems, and databases, while older vulnerabilities remain exploitable. Add in the number of dashboards, alerts, and data points each information security tool provides, and security teams find themselves swimming in oceans of data and unsure where to focus their energy. There is an urgent need to have a cohesive plan in place to cut through the noise and face these threats. Cybersecurity operations do not require expensive tools or large capital investments. There are ways to capture the necessary data. Teams protecting data and supporting HIPAA compliance can do this. All that's required is a plan, which author Eric Thompson provides in this book. What You Will Learn: Know what threat intelligence is and how you can make it useful. Understand how effective vulnerability management extends beyond the risk scores provided by vendors. Develop continuous monitoring on a budget. Ensure that incident response is appropriate. Help healthcare organizations comply with HIPAA. Who This Book Is For: Cybersecurity, privacy, and compliance professionals working for organizations responsible for creating, maintaining, storing, and protecting patient information. Kouvatsos, 2011-04-12. During recent years, a great deal of progress has been made in performance modelling and evaluation of the Internet towards the convergence of multi-service networks of diverging technologies supported by internetworking and the evolution of diverse access and switching technologies. The 44 chapters presented in this handbook are revised invited works drawn from PhD courses held at recent HETNET's International Working Conferences on Performance Modelling and Evaluation of Heterogeneous Networks. They constitute essential introductory material preparing the reader for further research and development in the field of performance modelling, analysis, and engineering of heterogeneous networks and of next and future generation Internets. The handbook aims to unify relevant material already known but dispersed in the literature, introduce the readers to unfamiliar and unexposed research areas, and generally illustrate the diversity of research found in the high-growth field of convergent heterogeneous networks and the Internet. The chapters have been broadly classified into 12 parts covering the following topics: Measurement Techniques, Traffic Modelling and Engineering, Queueing Systems and Networks, Analytic Methodologies, Simulation Techniques, Performance Evaluation Studies, Mobile Wireless and Ad Hoc Networks, Optical Networks, QoS Metrics and Algorithms, All-IP Convergence and Networking, Network Management and Services, and Overlay Networks. **Computer Security** Javier Lopez, Jianying Zhou, Miguel Soriano, 2018-08-10.
