However, the properties of this material have now for some time made it possible to design free shapes and highly complex structures. Today, the wood laboratory of the EPF Lausanne, which was originally founded by Julius Natterer, is testing the production of origami structures, ribbed shells, fabric structures, and curved panels under the guidance of Professor Weinand using digital calculation and computer-aided processing methods. The research results are tested in prototypes which demonstrate the potential applications in large-scale timber buildings. By exploring the hitherto unused potential of wood as a construction material, this book provides an exciting and inspiring outlook on a new generation of timber buildings. *Building Simply* Christian Schittich, 2013-01-07 No detailed description available for Building Simply. **Materials, Structures, and Standards** Julia McMorrough, 2006-01-01 Most architectural standards references contain thousands of pages of details overwhelmingly more than architects need to know on any given day.
