Epic Adventures Jan Jansen, Hendrik M. J. Maier, 2004 The many adventures of the epic in modern times are fascinating topics in themselves The Romantics claimed that every self respecting nation should at some time have had one and they set out to reconstruct these epics for political as well as cultural reasons Such epics represented earlier stages in the development of nation states and in this modern world they were for a long time hard to appreciate The introduction of tape recorders however brought the epic back in the limelight It became fashionable for scholars to record long oral narratives and to present them as long written poems that reflected deeply ingrained ideas Because of this technology the idea of the epic was revitalized This volume presents critical analyses of epics in Sub Saharan Africa the former Soviet Union South East Asia Medieval Europe and America and discusses the process of revitalization sometimes even invention of epics in particular historical political and academic contexts Jan Jansen is a member of the Department of Anthropology of the University of Leiden Netherlands Henk M J Maier is professor in the Department of Languages and Cultures of Southeast Asia and Oceania of the University of Leiden Netherlands

Unit Operations Ian Bogost,2008-01-25 In Unit Operations Ian Bogost argues that similar principles underlie both literary theory and computation proposing a literary technical theory that can be used to analyze particular videogames Moreover this approach can be applied beyond videogames Bogost suggests that any medium from videogames to poetry literature cinema or art can be read as a configurative system of discrete interlocking units of meaning and he illustrates this method of analysis with examples from all these fields The marriage of literary theory and information technology he argues will help humanists take technology more seriously and help technologists better understand software and videogames as cultural artifacts This approach is especially useful for the comparative analysis of digital and nondigital artifacts and allows scholars from other fields who are interested in studying videogames to avoid the esoteric isolation of game studies The richness of Bogost s comparative approach can be seen in his discussions of works by such philosophers and theorists as Plato Badiou Zizek and McLuhan and in his analysis of numerous videogames including Pong Half Life and Star Wars Galaxies Bogost draws on object technology and complex adaptive systems theory for his method of unit analysis underscoring the configurative aspects of a wide variety of human processes His extended analysis of freedom in large virtual spaces examines Grand Theft Auto 3 The Legend of Zelda Flaubert s Madame Bovary and Joyce s Ulysses In Unit Operations Bogost not only offers a new methodology for videogame criticism but argues for the possibility of real collaboration between the humanities and information technology
