Computational Linguistics Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition, it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis, and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition, and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries.

Fast Solution of Discretized Optimization Problems Karl-Heinz Hoffmann, Ronald W. Hoppe, Volker Schulz, 2012-12-06 Differential equations, partial as well as ordinary, are one of the main tools for the modeling of real-world application problems. Pursuing the ultimate aim of influencing these systems in a desired way, one is confronted with the task of optimizing discretized models. This volume contains selected papers presented at the International Workshop on Fast Solution of Discretized Optimization Problems, which took place at the Weierstrass Institute for Applied Analysis and Stochastics in Berlin from May 08 until May 12, 2000. The conference was attended by 59 scientists from 10 countries. The scientific program consisted of 8 invited lectures presented by H. G. Bock (IWR Heidelberg), M. Heinkenschloss (Rice University, Houston), K. Kunisch (University of Graz), U. Langer (University Linz), B. Mohammadi (University of Montpellier), J. Petersson (University of Linköping), E. Sachs (University of Trier), F. Troltzsch (Technical University of Chemnitz), and 28 contributed talks. The aim of this workshop was to foster the exchange of ideas between the still comparatively separated disciplines of nonlinear optimization, on the one side, and numerical methods for differential equations, on the other side. This is necessary for the successful solution of various current optimization problems in practical applications: shape optimization, topology optimization, process optimization. Therefore, the organizing committee as well as the speakers have come from both these communities.

Smart Card Programming Ugo Chirico, 2014-05-21 With Smart Card Programming, the reader will have the expert guidance he needs to work with smart cards. The book offers a comprehensive guide to the technological aspects related to smart cards, providing a high-level overview of the technological panorama and giving an in-depth technical coverage about the related architectures, programming paradigms, and APIs. The first part of the book introduces the smart card technologies, the general concepts, and a few case studies. It is addressed also to a non-technical reader who wishes a high-level overview on the smart card world. The second part of the book is a technical guide to smart card specifications and programming paradigms. It dives into technical topics about smart card programming and applications development in C, C++, Visual Basic, and Java. Key features include Contact and Contactless Cards, ISO 7816, NFC, JavaCard.
