Kuo,2005-09-23

The ballooning body of research devoted to hyaluronan HA reflects its enormous potential for various medical applications. There have been many successes of varying degrees in the development of medical products based on HA but also some setbacks. While there is obviously ample information available on the chemistry and various properties of this macromolecule, *Practical Aspects of Hyaluronan Based Medical Products* is the first book devoted to systematically applying this knowledge to product development. Based on the author's extensive experience working with HA, this book explores in detail the chemistry, composition, formulation, testing, safety, effectiveness, quality control, and regulatory approval of HA medical products. It begins with a survey of the historical development and recent products based on hyaluronan. Subsequent chapters detail the rheological properties of the molecule and explore the chemical principles and methods forming the technical basis of product development, illustrated by more than 50 figures of chemical structures, reaction schemes, and rheological properties. Individual chapters then consider standards, tests, and analytical methods, safety of HA based products for their indicated applications, and clinical performance, mechanism of action, and product characteristics. *Practical Aspects of Hyaluronan Based Medical Products* surveys FDA review documents as well as peer-reviewed journal articles to identify the elements essential to successful product development, namely understanding the critical issues in the regulatory path and linking clinical performance of the products to their original design. Reason And Imagination: Reflections On Research In Organic Chemistry- Selected Papers Of Derek H R Barton Derek H R Barton, 1996-03-21. This book is about the recognition of new principles in Organic Chemistry. It is also about the discovery and invention of Chemical Reactions. In addition, it deals with the determination of structure by chemical degradation during the epoch when physical methods were not well developed. Also presented are new reagents and new types of functional groups never seen in chemistry before. The overall aim of the collected papers is to show how thought can direct original research and to demonstrate how thought about old or new chemical facts can lead to originality. This is further illuminated by commentaries which Prof Barton has written to accompany these papers. **Title Announcement Bulletin**, 1957
