Processing of Visible Language Paul A. Kolars,2013-11-21 The second symposium on processing visible language constituted a different mix of participants from the first Greater emphasis was given to the design of language both in its historical development and in its current display and to practical questions associated with machine implementation of language in the interactions of person and computer and in the characteristics of the physical and environmental objects that affect the interaction Another change was that a special session on theory capped the proceedings Psychologists remained heavily involved however both as contributors to and as discussants of the work presented The motivation of the conferences remains one of bringing together graphic designers engineers and psychologists concerned with the display and acquisition of visible language The papers separately tended to emphasize the one of the three disciplines that mark their authors field of endeavor but are constructed to be general rather than parochial Moreover within the three disciplines papers emphasized either the textual or the more pictorial aspects For example a session on writing systems ranged from principles that seem to characterize all such systems to specific papers on ancient Egyptian writing modern Korean and English shorthand The complementary session on the nontextual media opened with a discussion of general principles of pictorial communication and included papers on communicating instructions general information or religious belief through

An Investigation of Middle-grade Students' Comprehension of Logical Connectives Found in Sixth- and Eighth-grade Social Science Textbooks

Dorothea P. Fields, 1992 *The Oxford Handbook of Reading* Alexander Pollatsek, Rebecca Treiman, 2015-07-21

Writing is one of humankind's greatest inventions and modern societies could not function if their citizens could not read and write. How do skilled readers pick up meaning from markings on a page so quickly and how do children learn to do so? The chapters in the *Oxford Handbook of Reading* synthesize research on these topics from fields ranging from vision science to cognitive psychology and education, focusing on how studies using a cognitive approach can shed light on how the reading process works. To set the stage, the opening chapters present information about writing systems and methods of studying reading, including those that examine speeded responses to individual words as well as those that use eye movement technology to determine how sentences and short passages of text are processed. The following section discusses the identification of single words by skilled readers as well as insights from studies of adults with reading disabilities due to brain damage. Another section considers how skilled readers read a text silently, addressing such issues as the role of sound in silent reading and how readers' eyes move through texts. Detailed quantitative models of the reading process are proposed throughout. The final sections deal with how children learn to read and spell and how they should be taught to do so. These chapters review research with learners of different languages and those who speak different dialects of a language; discuss children who develop typically as well as those who exhibit specific disabilities in reading; and address questions about how reading should be taught with populations ranging from preschoolers to adolescents and how research findings have influenced education. The *Oxford Handbook of Reading* will benefit researchers and graduate students in the fields of cognitive psychology, developmental psychology, education, and related fields, e.g. speech and language pathology, who are interested in reading, reading instruction, or reading disorders.
