Knecht, C. Rawson and R. Loewenthal. 2 vols. [with] Specimens of dyed fabrics** Edmund Knecht, 1893 **States of Emergency** Russ Castronovo, Susan Gillman, 2010-05 The contributors to this volume argue that for too long inclusiveness has substituted for methodology in American studies scholarship The ten original essays collected here call for a robust comparativism that is attuned theoretically to questions of both space and time States of Emergency asks readers to engage in a thought experiment imagi *The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991* J. D. Hunley, 2013-03-15 In this definitive study J D Hunley traces the program s development from Goddard s early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight
Dune Worlds Ralph D. Lorenz, James R. Zimbelman, 2014-04-22 This book describes how sand dunes work why they are the way they are in different settings and how they are being studied Particular attention is paid to their formation and appearance elsewhere in the solar system New developments in knowledge about dunes make for an interesting story like

the dunes themselves dune science is dynamic and the visual appeal of Aeolian geomorphology ensures that this is an attractive volume The book is divided into 4 parts the first of which introduces dunes as a planetary phenomenon showing a landscape reflecting the balance of geological processes volcanism impact tectonics erosion deposition of sediments Dunes are then considered as emergent dynamical systems the interaction of sand and wind conspires to generate very characteristic and reproducible shapes Analogies are given with other emergent structures such as patterned ground before the influence of dunes on desert peoples and infrastructure is studied together with their use as forensic climatological indicators Dune Physics is looked at with regard to the mechanics of sand the physics of wind saltation interaction of sand and air dunes versus ripples and transverse Aeolian ridges the classification of dune morphology and the sources and sinks of sand Dune Trafficability considers soil mechanics effects on mobility on Earth Mars and elsewhere In the second part Earth Mars Titan and other moons and planets are examined beginning with a survey of the major deserts and dunefields on Earth The authors then turn to Mars and its environment sediment type dune stratigraphy sediment source and sinks and the association of dunes with topographic features Titan follows its thick cold atmosphere methane dampness low gravity morphology interaction with topography and the implications of dunes for climate and winds Dunes elsewhere conclude this part There are few dunefields on Venus but there is a possibility of Aeolian transport on Triton and volcanic related windstreaks on Io
