Diagnostic Issues in Substance Use Disorders John B. Saunders, Marc A. Schuckit, Paul J. Sirovatka, Darrel A. Regier, 2008-05-20

Inviting the help of colleagues worldwide the concise *Diagnostic Issues in Substance Use Disorders* is part of the new series *Advancing the Research Agenda for DSM V* Its 19 chapters by an international group of experts are designed to stimulate questions that will help guide research related to the development of the next editions of the *Diagnostic and Statistical Manual of Mental Disorders DSM V* and the *International Classification of Diseases ICD 11* with the goal of ensuring that the major substance use diagnoses represent the same condition in both references They cover 10 major issues in three main sections

- Overarching issues relevant for the development of international diagnostic systems
- statistical modeling techniques and whether DSM V should use categorical and or dimensional diagnostic approaches
- methods review emphasizing new hybrid techniques for developing and testing diagnostic concepts the need for separate clinical and research oriented diagnostic criteria incorporating both categorical and dimensional attributes

neurobiological changes characterizing substance dependence the importance of cultural attributes in developing definitions of substance use disorders and the history of the development of diagnostic systems and how to optimize the crosswalk between DSM and ICD

Research questions more specific to the substance use disorders section of DSM

- comorbidity between substance use disorders and other psychiatric conditions
- the relatively unique clinical course of substance induced mental disorders and appropriate treatment approaches
- the precision of the criteria and threshold for a diagnosis and how to improve them
- the subtypes of substance use disorder including how they have been derived and the extent to which they relate to neurobiological processes
- the seemingly high prevalence of alcohol dependence in young people suggested research questions to evaluate the application of diagnostic criteria to adolescents and the specific psychoactive substances cannabis and nicotine

Whether substance use disorders should be included in a broader section termed *addictive disorders*

- impulse control disorders especially pathological gambling and the advantages and disadvantages of adding it to the current substance use disorders section
- identifying research opportunities regarding their assessment and neurocognitive and physiological bases
- discussing the specifics of the research agenda and how it might be implemented and presenting questions generated by the research agenda developmental process

This informative compendium distills the findings of a wealth of recent research and concludes with recommendations for exploiting research opportunities that promise to inform decisions regarding DSM V and other classification systems As such it will prove invaluable for clinicians and researchers everywhere
