Laser Cutting and 3-D Printing for Railway Modellers Bob Gledhill, 2016-11-30 Although most people have heard of laser cut and 3 D printed model railway parts and kits most modellers have little knowledge or experience of them This fascinating and well illustrated book describes in non technical language how these machines work and how railway modellers can use them to produce remarkable models for their layouts With reference to the different modelling scales the author discusses in detail the advantages and disadvantages of different types of machines and the materials they employ He also shows how beginners can install and use Sketchup Make a free CAD Computer Aided Design program from the Internet With step by step instructions and accompanying photographs the author takes the modeller through the early stages of using this program before providing many examples of how to design model railway related items such as laser cut roofing tiles palisade fencing brickwork and the detailed elements of station awning In addition he demonstrates how to create 3 D printed furniture barrels packing crates guttering and down pipes rivet heads and a workman s hut The CAD skills learnt whilst following the clear instructions on how to draw these examples will enable modellers to design their own model railway parts which can either be produced on their own machines or be sent away to be created by one of the many bureau companies Clear step by step instructions are given along with over 430 superb colour images

Mirror Opens Ancient Temple Door. William Van Zyl, 2023-12-29 I have produced a fictitious short story about how Lara and Alexander the two archaeologists found the elusive El Dorado temple and unearthed the Golden Mask In this resource including the exciting legend of the elusive city of El Dorado I look at the story the gold the treasure the golden mask and a modern day escape room I provide prompts for using technology in the context of creating an El Dorado themed escape room Inspired by my visit to an escape room in Hamilton NZ in December 2023 I show how technology like digital sensors surveillance cameras and more could be used in

escape rooms I use a simple microprocessor like the Arduino Uno to show how this microprocessor could detect light and switch a rack and pinion powered by an electric motor to open a door Just like Lara and Alexander opened the door by reflecting the shaft of daylight from the cave roof onto the mirrors and the Sun motif I use the Arduino an LDR light dependent resistor a relay and an electric motor to show how a door in an escape room can be opened This resource could be helpful to teachers and students The focus is integrating different subject areas for a lesson for high school students For example the brief is to design an El Dorado themed escape room I focus on technical aspects like art design and electronics digital sensors surveillance cameras servos racks and pinions and more to detect switch and move doors The focus is also on how to create a light sensor LDR light dependent resistor to detect when a mirror reflects light that suddenly comes from a crack in the cave an electrical light switched on after a symbolic puzzle is solved Improving and developing collaboration and solving real life problems is another aspect I investigate I look at the design of a board game context Escape room Developing creative and innovative skills of students and teachers I also touch on renewable systems Installing solar panels wind turbines inverters and 12 Volt DC batteries on a micro scale to power an escape room or a model of an escape room Lastly I provide links to cave ecosystems I include the Waitomo Caves in New Zealand famous glowworms See the ideas and concepts for possible lessons for students in this article It is challenging to layer embed and integrate different subject areas into one or a set of lessons
