**Mathematical Modeling in Ecology** C. Jeffries, 2012-12-06 Mathematical ecology is the application of mathematics to describe and understand ecosystems There are two main approaches One is to describe natural communities and induce statistical patterns or relationships which should generally occur However this book is devoted entirely to introducing the student to the second approach to study deterministic mathematical models and on the basis of mathematical results on the models to look for the same patterns or relationships in nature This book is a compromise between three competing desiderata It seeks to maximize the generality of the models constrain the models to behave realistically that is to exhibit stability and other features and minimize the difficulty of presentations of the models The ultimate goal of the book is to introduce the reader to the general mathematical tools used in building realistic ecosystem models Just such a model is presented in Chapter Nine The book should also serve as a stepping stone both to advanced mathematical works like

Stability of Biological Communities by Yu M Svirezhev and D O Logofet Mir Moscow 1983 and to advanced modeling texts like Freshwater Ecosystems by M Straskraba and A H Gnauch Elsevier Amsterdam 1985
