Introduction to Probability with Mathematica Kevin J. Hastings, 2000-11-27 Newcomers to the world of probability face several potential stumbling blocks They often struggle with key concepts sample space random variable distribution and expectation they must regularly confront integration infrequently mastered in calculus classes and they must labor over lengthy cumbersome calculations Introduction to Probability with Mathematica is a groundbreaking text that uses a powerful computer algebra system as a pedagogical tool for learning and using probability Its clever use of simulation to illustrate concepts and motivate important theorems gives it an important and unique place in the library of probability theory The author smoothly integrates the technology with the traditional approach and subject matter thereby augmenting rather than overpowering it This book lives and breathes in the sense that not only can it be read and studied in an armchair but each section also exists as a fully executable Mathematica notebook on the CRC Web site Students will find Introduction to Probability with Mathematica an engaging accessible yet challenging way to venture into the fascinating subject of probability

can could and should learn Today's digital technology influences the mathematics curriculum in two quite different ways One influence is on the delivery of mathematics through hardware such as desktops laptops and tablets Another influence is on the doing of mathematics using software available on this hardware but also available on the internet calculators or smart phones These developments rapidly increasing in their availability and decreasing in their cost raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and learned This volume presents the talks given at a conference held in 2014 at the University of Chicago sponsored by the Center for the Study of Mathematics Curriculum The speakers experts from around the world and inside the USA were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other The result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today's technology
