The following section focuses on rivers and streams including model complexity and data requirements, methods for estimating mixing, hydrologic routing methods, and unsteady flow modeling. The third section considers lakes and reservoirs and discusses stratification and temperature modeling, mixing methods, reservoir routing, and water balances and dynamic modeling using one, two, and three dimensional models. The book concludes with a section on estuaries containing topics such as origins and classification, tides, mixing methods, tidally averaged estuary models, and dynamic modeling. Over 250 figures support the text. This is a valuable guide for students and practicing modelers who do not have extensive backgrounds in fluid dynamics.
