

Lab - Wave Properties in a Spring

The wave characteristics you will observe in this lab are common to all waves (water, light, sound, etc.). Use your prior knowledge and the book to fill in the following blanks, then go in the hall and perform the lab.

A wave is a disturbance that moves through (propagates) through empty space or through a _____. There are two types of waves. A _____ wave requires matter to travel. List some examples of this type:

A _____ wave does not require a medium. Examples include: _____
In order to start and transmit a mechanical wave, a source of _____ and an _____ medium are required. A single disturbance is referred to as a _____, and a series of disturbances is a wave _____.

The questions in bold are those you should observe directly. Others will be answered using the book.

A. TYPES OF MECHANICAL WAVES: In the hall, stretch the slinky on the floor until it is stretched (but still loose). Practice sending single pulses down the slinky by popping your wrist from the center to the side and back to the center. Then send a continuous wave train along as your partner holds the other end still. A piece of ribbon should be tied to one coil. Watch the motion of this ribbon (representing a particle) as the wave travels through the spring.

In this type of wave, the particles move (perpendicular, parallel) _____ to the direction the wave travels. This type of wave is called a _____ wave. Its pulses are called _____ and _____.

Now send a pulse by quickly pushing the spring forward and pulling it back, as shown. This type of wave is called _____. Watch the motion of the ribbon. In this type, the particles move _____ to the direction the wave travels. Its pulses are called _____ and _____. Label each.

Note that all waves transfer _____ without transferring _____. In mechanical waves, particles of the medium vibrate back and forth in simple harmonic motion while the disturbance (or _____) moves from one place to another.

B. WAVE SPEED

Send a large pulse, followed by a small one. Does one pulse catch up to the other? _____
(Hint: The person who sends these waves should watch how the waves look when they return. Make sure that both pulses are large enough initially to make it back to the sender!) The size of the pulse is called the _____ of the wave. Did the size affect the speed? _____
Generate a single transverse pulse in the slinky, keeping the stretch constant. Using a stopwatch, time the journey of the pulse from one end to the other and back again. Take the average of several trials. _____

Without changing your positions on the floor (therefore keeping the _____ the pulse travels the same), pull the slinky tighter using only about 3/4 of the coils. This makes a completely different medium through which the pulse will travel. Time the journey as before. _____

Does the kind of medium affect the speed of the pulse? _____
