Franks,Jonathan H. Turner,2012-07-09 Until recently a handbook on neurosociology would have been viewed with skepticism by sociologists who have long been protective of their disciplinary domain against perceived encroachment by biology But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology Much of this has been encouraged by the coeditors of this volume David Franks and Jonathan Turner This new interest has been increased by the explosion of research in neuroscience on brain functioning and brain environment interaction via new MRI technologies with implications for social and psychological functioning This handbook emphasizes

the integration of perspectives within sociology as well as between fields in social neuroscience For example Franks represents a social constructionist position following from G H Mead s voluntaristic theory of the act while Turner is more social structural and positivistic Furthermore this handbook not only contains contributions from sociologists but leading figures from the psychological perspective of social neuroscience **Robotics** Nicholas Roy,Paul Newman,Siddhartha Srinivasa,2013-07-05 Robotics Science and Systems VIII spans a wide spectrum of robotics bringing together contributions from researchers working on the mathematical foundations of robotics robotics applications and analysis of robotics systems

Trends in Teaching Experimentation in the Life Sciences Nancy J. Pelaez,Stephanie M. Gardner,Trevor R. Anderson,2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies

The book also provides practical teacher guides and exemplars of assignments and assessments. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy. It will be beneficial to life science instructors, biology education researchers and science administrators who aim to improve teaching in life science departments. Chapters 6, 12, 14 and 22 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Philanthropy in Practice

Ekkehard Thümmler, 2017-07-06. Philanthropic foundations are experiencing a crisis of professional identity. They attract considerable hopes due to an unusually high degree of independence and freedom of manoeuvre which theoretically places them in a privileged position to find novel solutions to societies most severe and intractable problems. However the field is said to suffer from a pervasive lack of orientation as to how these aspirations can be realized. Compared to other professions it can be said that there exists neither reliable knowledge nor established practices which might guide the strategy development and the daily practice of foundations. This void is frequently filled by changing fads which present easy to grasp recipes and often make bold promises of how foundations can change the world. Yet none of them has ever met these expectations. *Philanthropy in Practice* shows how philanthropic organizations can effectively address this predicament. Drawing on the public philosophy of Pragmatism it argues that to be effective they need to go for the solution of social problems of middle range. The book puts at center stage the crucial role of niches in terms of bounded, protected and stable social spaces which are rich in resources. They render possible the experiments required to develop effective interventions and facilitate the retention of novel solutions to social problems. The model builds upon and is illustrated by four in depth case studies from the UK, Germany and Switzerland. With its sharp analytical eye and substantial evidence *Philanthropy in Practice* will reshape the way we think about the questions of what impact philanthropy can reasonably hope to achieve and by which means.
