Recently statistical knowledge has become an important requirement and occupies a prominent position in the exercise of various professions In the real world the processes have a large volume of data and are naturally multivariate and as such require a proper treatment For these conditions it is difficult or practically impossible to use methods of univariate statistics The wide application of multivariate techniques and the need to spread them more fully in the academic and the business justify the creation of this book The objective is to demonstrate interdisciplinary applications to identify patterns trends association and dependencies in the areas of Management Engineering and Sciences The book is addressed to both practicing professionals and researchers in the field **Biomass** Maggy Ndombo Benteke Momba, 2010-08-12

Due to demands placed on natural resources globally and subsequent deterioration of the environment there is a need to source and develop appropriate technology to satisfy this requirement For decades mankind has largely depended on natural resources such as fossil fuels to meet the ever increasing energy demands Realizing the finite nature of these resources emphasis is now shifting to investigating alternate energy source governed by environmentally friendly principles The abundance of biomass and associated favorable techno economics has recently changed global perceptions of harnessing biomass as a valuable resource rather than a waste To this end this book aims to make a contribution to exploring further this area of biomass research and development in the form of a compilation of chapters and covering areas of ecological status of different types of biomass and the roles they play in ecosystems current status of biomass utilization and deriving energy and other value added products from biomass In this context biomass can be defined as large plants and trees and different groups of microorganisms This book will serve as an
