Angelakis,Joan B. Rose,2014-09-14 Most of the technological developments relevant to water supply and wastewater date back to more than to five thousand years ago These developments were driven by the necessity to make efficient use of natural resources to make civilizations more resistant to destructive natural elements and to improve the standards of life both at public and private level Rapid technological progress in the 20th century created a disregard for past sanitation and wastewater and stormwater technologies that were considered to be far behind the present ones A great deal of unresolved problems in the developing world related to the wastewater management principles such as the decentralization of the processes the durability of the water projects the cost effectiveness and sustainability issues such as protection from floods and droughts were intensified to

an unprecedented degree New problems have arisen such as the contamination of surface and groundwater Naturally intensification of unresolved problems has led to the reconsideration of successful past achievements This retrospective view based on archaeological historical and technical evidence has shown two things the similarity of physicochemical and biological principles with the present ones and the advanced level of wastewater engineering and management practices Evolution of Sanitation and Wastewater Technologies through the Centuries presents and discusses the major achievements in the scientific fields of sanitation and hygienic water use systems throughout the millennia and compares the water technological developments in several civilizations It provides valuable insights into ancient wastewater and stormwater management technologies with their apparent characteristics of durability adaptability to the environment and sustainability These technologies are the underpinning of modern achievements in sanitary engineering and wastewater management practices It is the best proof that the past is the key for the future Evolution of Sanitation and Wastewater Technologies through the Centuries is a textbook for undergraduate and graduate courses of Water Resources Civil Engineering Hydraulics Ancient History Archaeology Environmental Management and is also a valuable resource for all researchers in the these fields Authors Andreas N Angelakis Institute of Iraklion Iraklion Greece and Joan B Rose Michigan State University East Lansing MI USA

Anaerobic Co-Digestion of Lignocellulosic Waste Luis Isidoro Romero García, Carlos José Álvarez Gallego, Luis Alberto Fernández Güelfo, 2021-09-02 Some terms such as eco friendly circular economy and green technologies have remained in our vocabulary because the truth is that mankind is altering the planet to put its own subsistence at risk Besides for rationalization in the consumption of raw materials and energy the recycling of waste through efficient and sustainable processes forms the backbone of the paradigm of a sustainable industry One of the most relevant technologies for the new productive model is anaerobic digestion Historically anaerobic digestion has been developed in the field of urban wastes and wastewater treatments but in the new challenge its role is more relevant Anaerobic digestion is a technologically mature biological treatment which joins bioenergy production with the efficient removal of contaminants This issue provides a specialized but broad in scope overview of the possibilities of the anaerobic digestion of lignocellulosic biomass mainly forestry and agricultural wastes which is expected to be a more promising substrate for the development of biorefineries Its conversion to bioenergy through anaerobic digestion must solve some troubles the complex lignocellulosic structure needs to be deconstructed by pretreatments and a co substrate may need to be added to improve the biological process Ten selected works advance this proposal into the future
