Carcinogenesis and Mutagenesis Testing J. F. Douglas, 2012-12-06 Cancer has become the most critical health problem in the United States It is expected that 25% of the people will develop this dread disease and many of these will die from the malady The causes of cancer are varied but the best estimate available is that 70 90% arise from environmental factors These statistics have triggered widespread governmental action along two lines 1 An effort to identify those chemicals and conditions that give rise to malignant processes has been mounted by the Carcinogenesis Testing Program the National Cancer Program and subsequently the National Toxicology Program 2 Regulatory laws have been enacted that are administered by agencies such as TSCA FIFRA EPA FDA OSHA and so on whose mission is to minimize public exposure to carcinogens Since direct verification that specific chemicals induce cancer in humans is necessarily limited to known incidences and is therefore rare most chemicals are identified as carcinogens only by laboratory experiments At present the only accepted procedure is long term animal bioassay and not only are these studies expensive and time consuming but current worldwide resources permit the evaluation of only 300 400 chemicals per year a miniscule amount compared to what is available in the commercial world 30 000 existing chemicals with approximately 700 new such materials being introduced every year

Countercurrent Chromatography A. Berthod, 2002-10-10 Countercurrent chromatography CCC is a separation technique in which the stationary phase is a liquid The mobile phase is also a liquid so biphasic liquid systems with at least two solvents are used Centrifugal fields are used to hold the liquid stationary phase while pushing the liquid mobile phase through it This comprehensive reference covers recent advancements in the two types of CCC machines the high speed CCCs

without rotary seals and with coiled spools and centrifugal partition chromatographs CPC with rotary seals and interconnected channels Written by leading international experts in the CCC field the book focuses on the liquid nature of the stationary phase giving newcomers the basis to do CCC efficiently and rapidly explaining the art of obtaining a biphasic liquid system describing the flow patterns in both CPC and high speed CCC machines showing possible other uses of a liquid stationary phase presenting a wealth of applications in the separation of organic pharmaceutical and inorganic mixtures and demonstrating that even supercritical fluids can be used in CCC
