

## WATER QUALITY PARAMETERS & INDICATORS

Water quality describes the "condition" of water in various categories. Water quality tests can give information about the health of the ecosystem. By testing water over a period of time, this knowledge can help us to see if the water is healthy.

Parameters that may be tested include temperature, pH, salinity, turbidity, and more. Each parameter is a measurement of the degree to which the water is healthy and suitable for water quality.

### TEMPERATURE

Temperature of a substance is a measure of the amount of thermal energy it contains. The amount of thermal energy is measured by the amount of heat that is transferred to or from the substance. Temperature is a measure of the amount of thermal energy that is transferred to or from the substance. The amount of thermal energy that is transferred to or from the substance is measured by the amount of heat that is transferred to or from the substance.

Temperature also affects the rate of photosynthesis of plants. The rate of photosynthesis is affected by the amount of light that is available. The rate of photosynthesis is also affected by the amount of carbon dioxide that is available. The rate of photosynthesis is also affected by the amount of water that is available. The rate of photosynthesis is also affected by the amount of oxygen that is available.

Temperature affects the rate of chemical reactions. The rate of chemical reactions is affected by the amount of energy that is available. The rate of chemical reactions is also affected by the amount of reactants that are available. The rate of chemical reactions is also affected by the amount of products that are available.

### SALINITY

Salinity is a measure of the amount of salt in a solution. The amount of salt in a solution is measured by the amount of salt that is dissolved in the solution. The amount of salt that is dissolved in the solution is measured by the amount of salt that is present in the solution. The amount of salt that is present in the solution is measured by the amount of salt that is present in the solution. The amount of salt that is present in the solution is measured by the amount of salt that is present in the solution.
