Bacow, Michael Wheeler, 2013-06-29 This book has its origins in an M I T research project that was funded by the U S Environmental Protection Agency EPA Our immediate objective was to prepare a set of case studies that examined bargaining and negotiation as they occurred between government environmental advocates and regulatees throughout the traditional regulatory process The project was part of a larger effort by the EPA to make environmental regulation more efficient and less litigious The principal investigator for the research effort was Lawrence Suskind of the Department of Urban Studies and Planning Eight case studies were prepared under the joint supervision of Suskind and the authors of this book Studying the negotiating behavior of parties as we worked our way through an environmental dispute proved enlightening We observed missed opportunities for settlement negotiating tactics that backfired and strategies that appeared to be grounded more in intuition than in thoughtful analysis At the same time however we were struck by how often the parties ultimately managed to muddle through People negotiated not out of some idealistic commitment to consensus but because they thought it better served their own interests When some negotiations reached an impasse people improvised mediation These disputants succeeded in spite of legal and institutional barriers even though few of them had a sophisticated understanding of negotiation **Wastewater Treatment Fundamentals III- Advanced Treatment**

management while providing an in depth understanding of institutional interactions amongst different water related sectors The key characteristics of AWM i e polycentric governance organisational flexibility and public participation are investigated and described through a critical review of the relevant literature The book presents an empirical case study undertaken in a selected developing country city to investigate the potential gaps between the current water management approaches and possible implementation of AWM Feasibility of AWM operations is examined in an environment surrounded by established water management structure with centralised governance and an institutional process based on technical flexibility The key elements of AWM performance are re structured and transformed into decision support systems Multi criteria decision models are developed to facilitate quantification and visualization of the elements derived from the case study which is involved with water companies and water consumers The book describes how the concept of AWM along with structuring suitable decision support systems can be developed and applied to developing country cities The book highlights the barriers for applying the AWM strategies that include established centralised decision making bureaucratic interactions with external organisations lack of organisational flexibility within the institutions and lack of recognition of public role in water management The findings outline that despite the lack of adaptability in the current water management in the case study as an example of developing countries there are positive attitudes among water professionals and the public towards adaptability through public institutional participation High Plains States Groundwater Demonstration Program ,1996
