Ship Diagram Port Starboard:

Naval Battle Of Trafalgar, 1805 André Geraque Kiffer,2021-04-14 Napoleon's naval plan for 1805 was for the French fleet of the Mediterranean and part of the Spanish fleet to break the British blockade and meet in the Caribbean. They would then return assist the fleet in Brest to get out of the blockade and together about 50 ships of the line would guarantee a safe passage for the French invasion fleet to Britain. Before the battle French Admiral Villeneuve himself had expressed his conviction that Nelson would use some kind of unorthodox attack speculating that he was going to go straight against his line. Imagining something different for the British maneuver is difficult considering the fame obtained by Nelson. Therefore we will try to test whether it would have been possible for Villeneuve together with Gravina to reverse the historic result making it more worthy to include his name in the Arc de Triomphe.

The maritime industries have a long history of conservatism but this is now changing rapidly. The information age has also swept over ships and shipping and has been taken to heart to such an extent that for example flight simulators now cooperate with ship simulators and import useful new concepts and methodologies. The more than 50 papers contained in this book show what and why. Although traditionally conservative the marine world is also traditionally international and this has not changed. The papers in the book are by leading authors from all over the world and provide a detailed snap shot of the rapidly advancing state of the art together with pointers to the future. The overall theme of MARSIM 96 and therefore also of this book is Vessel manoeuvrability and marine simulation research training and assessment and includes original papers on topics such as bridge resource management distant learning and simulators coupled via The Internet virtual reality neural networks rudder propeller hydrodynamics prime mover models squat in shallow water and many more.
