**Guide to Maritime Informatics** Alexander Artikis, Dimitris Zissis, 2021-02-08 In the last 25 years information systems have had a disruptive effect on society and business Up until recently though the majority of passengers and goods were transported by sea in many ways similar to the way they were at the turn of the previous century Gradually advanced information technologies are being introduced in an attempt to make shipping safer greener more efficient and transparent The emerging field of

Maritime Informatics studies the application of information technology and information systems to maritime transportation. Maritime Informatics can be considered as both a field of study and domain of application. As an application domain it is the outlet of innovations originating from data science and artificial intelligence; as a field of study it is positioned between computer science and marine engineering. This new field's complexity lies within this duality because it is faced with disciplinary barriers yet demands a systemic transdisciplinary approach. At present there is a growing body of knowledge that remains undocumented in a single source or textbook designed to assist students and practitioners. This highly useful textbook reference starts by introducing required knowledge, algorithmic approaches and technical details before presenting real world applications. The aim is to present interested audiences with an overview of the main technological innovations having a disruptive effect on the maritime industry as well as to discuss principal ideas, methods of operation and applications and future developments. The material in this unique volume provides requisite core knowledge for undergraduate or postgraduate students employing an analytical approach with numerous real world examples and case studies.

A special course adoption price is available for an order of six or more copies from a university bookstore. Contact sales.us@brill.com or sales.nl@brill.com to learn more. This second edition of *Cases and Materials on the Law of the Sea* has been updated to address significant developments that have occurred in the law of the sea since the publication of the first edition in 2004. The text compiles cases, treaties, U.N. documents, commentaries and other teaching materials that systematically present law of the sea topics while placing those issues in the broader context of international law and international legal process. The book incorporates relevant historical materials alongside materials addressing more recent topics such as port security, the depletion of fish stocks and the operation of new international institutions. Extensive notes and discussion questions engage readers and enhance their understanding of the materials.

**The Legal Regime of Straits** Hugo Caminos, Vincent P. Cogliati-Bantz, 2014-12-22. The right of transit passage in straits and the analogous right of archipelagic sea lanes passage in archipelagic states negotiated in the 1970s and embodied in the 1982 UNCLOS sought to approximate the freedom of navigation and overflight while expressly recognising the sovereignty or jurisdiction of the coastal state over the waters concerned. However, the allocation of rights and duties of the coastal state and third states is open to interpretation. Recent developments in state practice such as Australia's requirement of compulsory pilotage in the Torres Strait, the bridge across

the Great Belt and the proposals for a bridge across the Strait of Messina the enhanced environmental standards applicable in the Strait of Bonifacio and Canada's claims over the Arctic Route make it necessary to reassess the whole common law of straits The Legal Regime of Straits examines the complex relationship between the coastal state and the international community **Sailing Directions (planning Guide) for the Arctic Ocean** United States. Defense Mapping Agency.

Hydrographic/Topographic Center,1983 **The Management of Maritime Regulations** Hristos Karahalios,2015-06-19 Ship management is a worldwide activity Modern ships are sophisticated designed structures equipped with several automatic devices It is estimated that 90 per cent of commodities transported worldwide are carried by ships Therefore there is great interest from many private and public organizations that those ships are operating manned designed and maintained within international acceptable standards The obligation of stakeholders to comply with maritime regulations is included in most statutory and commercial agreements and therefore inadequate implementation of maritime regulations exposes stakeholders to commercial risks This book explores how the application of mathematical decision making tools could be used to manage maritime regulations Performance management tools are proposed which would allow stakeholders to monitor the regulatory performance of their organization in order to reduce or eliminate those commercial risks The process of introducing an implementation process for maritime regulations worldwide is described within this text An emphasis is put on the role of main stakeholders in the regulatory process and reasons that increase the willingness of stakeholders to participate in the implementation of regulations This book will be of interest to scholars and students interested in the management of the shipping industry as well as ship owners and managers who are charged with implementing maritime regulations **Sailing Directions (planning Guide) for the North Sea and Baltic Sea** United States.
