

GENERAL DESCRIPTION

Completely new front sheet metal structure having additional flanging and reinforcement is used in all series. This sheet metal and support assembly type of construction combine to form a rigid front end sheet metal assembly.

The sheet metal is attached to a rigid rectangular structure consisting of two widely spaced side baffles connected at the top and bottom by heavy angle crossmembers and reinforced by diagonal cross braces. This combination radiator support and sheet metal support is attached to the frame with two carcass type cushions. On 1½ and 2 Ton Series a compression type coil spring is also incorporated in the support mounting to the frame. On LCF Series the sheet metal is supported by a U-type radiator support centrally attached to the frame front cross member.
