Countercurrent Chromatography A. Berthod, 2002-10-10 Countercurrent chromatography CCC is a separation technique in which the stationary phase is a liquid The mobile phase is also a liquid so biphasic liquid systems with at least two solvents are used Centrifugal fields are used to hold the liquid stationary phase while pushing the liquid mobile phase through it This comprehensive reference covers recent advancements in the two types of CCC machines the high speed CCCs without rotary seals and with coiled spools and centrifugal partition chromatographs CPC with rotary seals and interconnected channels Written by leading international experts in the CCC field the book focuses on the liquid nature of the stationary phase giving newcomers the basis to do CCC efficiently and rapidly explaining the art of obtaining a biphasic liquid system describing the flow patterns in both CPC and high speed CCC machines showing possible other uses of a liquid

Functional Neuroendocrine Tumors Bojana Popovic,Aviral Singh,Francesca Spada,Karin Zibar Tomsic,2025-09-10

One of authentic features of neuroendocrine tumors NETs is a potential to synthesize and secrete biogenic peptides and hormones Typically arising from tumors originating from the pancreas lungs and intestine these products can cause recognizable clinical hormone syndromes Even rarer among the rare functional NETs are in the minority compared to nonfunctional tumors i e 10 40% in a group of pancreatic NETs but they represent great diagnostic and therapeutic challenges For any case of functional NET hormonal hypersecretion syndrome causes excess morbidity sometimes even more threatening than the cancer itself This makes control of hormonal hypersecretion not only additional but sometimes in fact a primary therapeutic goal On the other hand secretory products can be useful as tumor markers and facilitate monitoring of treatment response Unfortunately many of these tumors become refractory to treatment over time and new modalities are required

The Supporting Roots of Trees and Woody Plants: Form, Function and Physiology A. Stokes,2013-04-17

This publication comprises the proceedings of the first International Conference devoted to the structural roots of trees and woody plants The Supporting Roots Structure and Function 20 24 July 1998 Bordeaux France The meeting was held under the auspices of IUFRO WPS 2 01 13 Root Physiology and Symbiosis and its aim was to bring together scientific researchers foresters and arboriculturalists to discuss current problems in structural root research and disseminate knowledge to an audience from a wide disciplinary background For the first time in an international conference emphasis was placed on presenting recent research in the field of tree anchorage mechanics and root biomechanics The way in which tree stability can be affected by root system symmetry and architecture was addressed as well as how movement during wind sway can influence the development and shape of woody roots The role of different nursery and planting techniques was

discussed in relation to effects on root system form and development Root response to different environmental stresses including water temperature nutrient and mechanical stress was addressed in detail The structure and function of woody roots was also considered at different levels from coarse to fine roots with several papers discussing the interaction between roots and the rhizosphere One of the conference highlights was the presentation of new methods in root research by a series of workshops held at LRBB INRA Pierroton on the northern border of the Gascony forest *Land Use Change and Balances of Greenhouse Gases in Colombian Tropical Savannas* Marco Antonio Rondon,2000 Current Research in Pharmaceutical Technology Sabine Globig,William Hunter Jr.,2011-12-15 This title includes a number of Open Access chapters

Trucksess,Albert E. Pohland,2008-02-05 Mycotoxins produced by molds are common contaminants of many important crops including wheat corn rice and peanuts Some mycotoxins are found in fruits and vegetables These contaminants have a broad range of toxic effects including carcinogenicity neurotoxicity and reproductive and developmental toxicity The occurrence of mycotoxins in foods is an unavoidable worldwide problem About 80 countries have imposed regulatory limits to minimize human and animal exposure to mycotoxins Regulatory limits including international standards have tremendous economic impact and must be developed using science based risk assessments The purpose of Mycotoxin Protocols is to provide the scientific and technological basis for analytical methods for use in obtaining the exposure data needed for risk assessments Mycotoxin Protocols is divided into four sections which are interconnected The first section Chapters 1 5 describe the general techniques for mycotoxin analysis with emphasis on the importance of method validation based on statistical parameters sampling procedures for collecting a sample as representative as possible of a bulk lot the isolation of mycotoxins for use as analytical standards or for toxicological studies the evaluation of purity and preparation of standards and the detection and identification of impurities in isolated mycotoxins Sections 2 4 Chapters 6 19 describe the most current chromatographic and immunochemical methods for studies on the major mycotoxins **Fingerprinting Techniques in Food Authentication and Traceability** K. S. Siddiqi,Leo M.L. Nollet,2018-10-08 There is an increasing interest by consumers for high quality food products with a clear geographical origin With these products in demand suitable analytical techniques are needed for the quality control Current analytical approaches are mass spectrometry techniques spectroscopic techniques separation techniques and others Fingerprinting Techniques in Food Authentication and Traceability discusses the principles of the techniques together with their advantages and drawbacks and reported applications concerning geographical authenticity A combination of methods analyzing different types of food compounds seems to be the most promising approach to establish the geographical origin The abundant acquired data are analyzed by chemometrics Producing safe and high quality food is a

prerequisite to ensure consumer health and successful domestic and international trade and is critical to the sustainable development of national agricultural resources Systems to trace food or feed products through specified stages of production processing and distribution play a key role in assuring food safety Analytical techniques that enable the provenance of food to be determined provide an independent means of verifying traceability systems and also help to prove product authenticity to combat fraudulent practices and to control adulteration which are important issues for economic religious or cultural reasons Proof of provenance has become an important topic in the context of food safety food quality and consumer protection in accordance with national legislation and international standards and guidelines Sweeteners Theodoros
