It begins with a brief overview of the essentials of marine biology and oceanography necessary to understand the conservation material. The book then moves through the different habitats in the marine environment such as coastal ecosystems, the open ocean, and the deep sea, exploring the organisms that live there and what conservation dangers and solutions affect these areas. Environmental Science Michael L. McKinney, Robert M. Schoch, Logan Yonavjak, 2012. Updated with the latest data from the field. This flexible, unbiased approach highlights: 1) how matter cycles over time through Earth's systems; 2) the importance of the input-throughput-output processes that describe the global environment; 3) how human activities and consumption modify Earth's systems; 4) and the scientific, economic, and policy solutions to environmental problems. Revised and updated to reflect current trends and statistics within Environmental Science. New content on renewable energy, solar panels, and compact fluorescent light bulbs. The latest information on Hydropower and the advantages and disadvantages of hydroelectric energy.
