LAB: TYPES OF CHEMICAL REACTIONS

PHYSICAL SCIENCE

Introduction

In this experiment, you will learn to differentiate among five general types of chemical reactions. (*Synthesis, Decomposition, Replacement, Single & Double, Combustion*) You will carry out certain representative reactions yourself, while your teacher will demonstrate another. Many chemical reactions are accompanied by observable physical changes. The appearance of a solid (precipitate) when solutions of substances are mixed is one such change. Others include the generation of a gas and a change in the color of a solution.

Materials

Magnesium	Potassium iodide	Potassium chromate
Hydrochloric acid	Sodium Bicarbonate	(tongs, alcohol lamp, test tube)
Lead (II) Nitrate	Silver nitrate	Watch glass

Procedure

Wear safety goggles and aprons during the entire lab.

1. **Magnesium metal and hydrochloric acid.** Place a small piece of magnesium on the watch glass. Add 10 drops of hydrochloric acid, and record observations on your data table. Dispose of the solid in the waste container and clean the watch glass.
2. **Magnesium metal and oxygen.** The teacher will perform this reaction. Record the results on your data table.
3. **Lead (II) Nitrate and potassium iodide.** Place two drops of lead (II) nitrate on the watch glass. Add two drops of potassium iodide. Record the results on your data table. Dispose of the materials, and clean the watch glass.
4. **Sodium bicarbonate with heat.** The teacher will perform this reaction. Record the results.
5. **Silver nitrate and potassium chromate.** Place two drops of silver nitrate on the watch glass. Add two drops of potassium chromate. Record the results in the data table. Dispose of the materials and clean the watch glass.
6. **Methane and oxygen.** This reaction occurs when a Bunsen burner is on. Come to the front of the classroom and demonstrate only with the teacher present.
7. Clean your table and return all equipment and materials.

Cosmology, Physics, and Philosophy Benjamin Gal-Or, 2012-12-06 What is unorthodox in this book Much has happened in the last few years especially in terms of the somewhat surprising rate at which the theories presented herein have been gaining increasing acceptance and support even by the most skeptical professionals Nevertheless the purpose of this up dated Preface is not to tell the biographical and acceptance story behind this book but to bring together some non physical and non technical conclusions for those readers who find the physico mathematical sections of this book too difficult to follow A secondary purpose is to present here some newer conclusions especially in general philosophy and in aesthetics Yet the main physico philosophical conclusions presented in this book are not to be summarized here For that purpose one must turn to the text itself The theories presented here have been developed in total isolation They were never presented in professional conferences as most current writers do Whether or not that was important remains to be seen Hence all I can state to critics and enthusiastic followers alike is the fact that I do not belong to any formal discipline pressure group or professional organization *Marine Research* ,1969 **American Druggist and Pharmaceutical Record** ,1897 **Marine Research, Fiscal Year 1968** National Council on Marine Resources and Engineering Development (U.S.), 1969

David M. Moss, Terry A. Osborn, Douglas Kaufman, 2010-08-27 *Interdisciplinary Education in the Age of Assessment* addresses a prevalent need in educational scholarship today. Many current standards enforced curricula follow strict subject specific guidelines. By contrast, this book examines assessment models specific to interdisciplinary education, positioning itself as a seminal volume in the field and a valuable resource to educators across the disciplines looking to broaden their curriculum.

Century Path, 1911 **A Man From Planet Earth** Giancarlo Genta, 2015-08-26 Sometime in the not too distant future, unbeknownst to Earth, the Galaxy is home to a number of spacefaring societies. This confederation enforces a strict protocol forbidding any contact with civilizations that have not yet achieved both a substantial spacefaring capability and sufficient maturity to control the technology explosion before triggering their own extinction. While this policy is intended to only bring in peaceful new members, matters change entirely when the confederation is threatened by some unknown entity. The menace, real or imagined, The confederation decides to break with the rules and sends a delegate to Earth to hire one of the supposedly belligerent Earthlings to investigate and to revive the confederation's long unused starfleet. The Earthman agrees but demands a high price; should he succeed, the confederation will have to accept Earth as a new member. As the threat becomes ever more acute, the question soon becomes which mission will prove harder: saving the confederation or convincing it to accept the deal. The extensive appendix, written in non-technical language, reviews the scientific and technological topics underlying the plot, ranging from the Fermi paradox, space travel, and artificial collective intelligence to theories on possible universal convergences in technological and biological development.
