Eiroa,A. Alberdi,Harley A. Thronson Jr.,T. de Graauw,C.J. Schalinski,2012-12-06 The past year has produced some of the most exciting results in the history of astronomy particularly in the area of planets

outside our solar system Only a half year before our meeting in Toledo Spain the first unambiguous detection of planet sized masses orbiting main sequence stars were reported Since that time evidence for a new exo planet has been reported almost at the rate of about once per month Some of these objects are likely to turn out to be very low mass stars but something like half show characteristics Jupiter like mass and near zero orbital eccentricity which appear to be unique to planets Almost at the same time that giant planets were being discovered regularly the two major space agencies ESA and NASA have identified searches for and detailed study of Earth like planets as a major priority for the future In ESA s Horizon 2000 Plus programme an infrared interferometer has been proposed as a possible future Cornerstone mission Similarly scientists in the US produced the Road Map for the Exploration of Neighboring Planetary Systems ExNPS which provided NASA with a long term plan which leads also to an infrared interferometer in space to study hypothetical Earth like worlds beyond our Solar System Such an observatory is designed to search for the thermal emission from a family of planets using interferometric nulling to remove the contaminating light from the central star
