Max Friesen,Owen K. Mason,2016-08-05 The North American Arctic was one of the last regions on Earth to be settled by humans due to its extreme climate limited range of resources and remoteness from populated areas Despite these factors it holds a complex and lengthy history relating to Inuit Iupiat Inuvialuit Yupik and Aleut peoples and their ancestors The artifacts dwellings and food remains of these ancient peoples are remarkably well preserved due to cold temperatures and permafrost allowing archaeologists to reconstruct their lifeways with great accuracy Furthermore the combination of modern Elders traditional knowledge with the region s high resolution ethnographic record allows past peoples lives to be reconstructed to a level simply not possible elsewhere Combined these factors yield an archaeological record of global significance the Arctic provides ideal case studies relating to issues as diverse as the impacts of climate change on human societies the complex process of interaction between indigenous peoples and Europeans and the dynamic relationships between environment economy social organization and ideology in hunter gatherer societies In the *The Oxford Handbook of the Prehistoric Arctic* each arctic cultural tradition is described in detail with up to date coverage of recent interpretations of all aspects of their lifeways Additional chapters cover broad themes applicable to the full range of arctic cultures such as trade stone tool technology ancient DNA research and the relationship between archaeology and modern arctic communities The resulting volume written by the region s leading researchers contains by far the most comprehensive coverage of arctic archaeology ever assembled **Regulating Deep Sea Mining** Klaas Willaert,2021-08-30 This book provides a comprehensive analysis and explanation of the legal regime with regard to deep sea mining The wide array of activities which we refer to as deep sea mining are not governed by one universal framework On the contrary numerous legal instruments play a role and it is important to maintain a clear overview The United Nations Convention on the Law of the Sea UNCLOS sets out the overarching regime but important distinctions

must be made For example deep sea mining in the Area is subject to international regulations adopted by the International Seabed Authority ISA while similar activities on the continental shelf fall under national jurisdiction and are governed by domestic legislation of the coastal state This dichotomy must be nuanced however taking into account that non state actors conducting deep sea mining operations in the Area must also adhere to national laws of the sponsoring state while mineral exploration and exploitation on the continental shelf are likewise subject to a number of international rules and principles Moreover separate exploration regulations were adopted by the ISA for distinct categories of mineral resources and national legislation on deep sea mining is quite diverse This book clearly identifies all relevant legal instruments assesses their role explains their interactions and engages with some of the topical issues that surround them **The Intersection of**

Economics and Ecology Gurudas Nulkar,2024-11-25 p This book is a machine generated literature overview highlighting the importance of natural capital while studying the economics of ecology It puts together available literature on this theme exploring it through the lens of sustainable development While the main content is machine generated each chapter contains curated published content overview and an introduction by the editor highlighting important areas and literature gaps describing the connection of the topic with human economy and examples of negative externalities The topics seek out research articles that show a connection with mainstream economy or rural livelihoods The connection between natural capital and human economy is well known but many of these negative externalities are complex problems to solve While there is a growing awareness to capture the value of natural capital in economic decision making there is no universal consensus However assessing the economic value of naturalresources and ecosystem services and integrating this information into decision making processes such as cost benefit analysis corporate reporting and government policy making holds a promise of finding long term solutions to these market failures By valuing natural capital decision makers can better understand the economic benefits and costs of different activities and policies and make more informed choices that balance economic social and environmental objectives Containing important introductions by the human editor to plug gaps in literature the book is a great resource for policy makers students of economics and sustainable development non governmental organisations working in this field and corporate managers who are responsible for allotting budgets towards corporate social responsibility programs *Seafloor heterogeneity: Artificial structures and marine ecosystem dynamics - recent advances* Toyonobu Fujii,Victoria Louise Georgia Todd,Daniel Joseph Pondella,Andrew James Guerin,2023-04-26
