Interactive Collaborative Learning Michael E. Auer, David Guralnick, James Uhomoibhi, 2017-01-07 This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning held 21-23 September 2016 at Clayton Hotel in Belfast UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning with a focus on collaborative learning. Today, the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning. **Leading Technology-Rich Schools** Barbara B. Levin, Lynne Schrum, 2015-04-25 This timely book shows how award-winning secondary schools and districts are successfully using technology and making systemic changes to increase student engagement, improve achievement, and reinvigorate the teaching and learning process. Through in-depth case studies, we see how experienced school and district leaders use technology in curricular, administrative, and analytical ways to meet the needs of 21st-century learners, educators, and communities. These cases reveal important details addressed by the leadership of these schools and districts that go beyond what they did with technology to include changes in school culture, curriculum, and teaching uses of assessment data, financial considerations, infrastructure, and involvement with the community. **Book Features:** Successful models from schools/districts experienced with using technology as a lever for school improvement; Case studies from diverse schools/districts across the country that show what works and how it works; A cross-case analysis that makes it easy to compare individual schools and identify common practices. Barbara B. Levin is a Professor in the Department of Teacher Education and Higher Education and Director of the Teachers Academy at the University of North Carolina at Greensboro. Lynne Schrum is Dean, College of Education and Human Services, West Virginia University. Barbara B. Levin and Lynne Schrum offer their readers the distinct advantage of compressing into a single volume what it took me decades to learn. They not only present the big ideas of effective school leadership but bring them alive through case studies that illustrate how those ideas manifest themselves in leaders' day-to-day behaviors. I encourage you to use the ideas and practices you find here to leverage technology to create schools in which all students and adults thrive. From the Foreword by Dennis Sparks, Emeritus Executive Director, National Staff Development Council. **Learning Forward Prepublication Reviews:** In **Leading Technology-Rich Schools**, the authors present a fascinating and exciting set of case studies that provide great insight into the ways leaders can support high-level innovation in schools. Importantly, their focus is on technology that enhances

learning and teaching rather than technology as an expensive school ornament A must read for those who study and practice educational leadership Jeffrey S Brooks Associate Professor and Educational Leadership Program Coordinator School of Education Iowa State University author of Black School White School Racism and Educational Mis leadership This book is a precious gift for the vast majority of administrators who desperately need concrete examples of how to create facilitate and sustain technology infused learning environments Scott McLeod Associate Professor and Founding Director CASTLE University of Kentucky These rich illustrations of technology leadership in secondary schools show how a number of complex variables must come together to produce the key outcome of positioning educational technology as a support to teaching and learning Examples of leadership practices that coordinate team members for interdependent work and invite teachers involvement should prove to be a valuable resource to practitioners and also provide insight to policymakers for how they can create supportive conditions for such work Sara Dexter Associate Professor Department of Leadership Foundations and Policy Curry School of Education University of Virginia Leading Technology Rich Schools is a key advance in understanding how technology can best be integrated in today s schools These case studies of effective practice are sure to become required reading for those in leadership positions who are using technology for school improvement Glen L Bull Samuel Braley Gray Professor of Education Curry School of Education University of Virginia The rubber meets the road in this well researched book with detailed stories of exemplary schools and school leaders that have leveraged technology as a key tool to make significant reforms stick Through these vivid case studies Levin and Schrum illuminate a dynamic and complex set of lessons learned to help all school leaders undertake transformations of their schools L Michael Golden CEO Educurious Artificial Intelligence in Education Vania Dimitrova, Benedict du Boulay, Art Graesser, 2009-06-15 This publication covers papers presented at AIED2009 part of an ongoing series of biennial international conferences for top quality research in intelligent systems and cognitive science for educational computing applications The conference provides opportunities for the cross fertilization of techniques from many fields that make up this interdisciplinary research area including artificial intelligence computer science cognitive and learning sciences education educational technology psychology philosophy sociology anthropology linguistics and the many domain specific areas for which AIED systems have been designed and evaluated AIED2009 focuses on the theme Building learning systems that care from knowledge representation to affective modelling The key research question is how to tackle the complex issues related to building learning systems that care ranging from representing knowledge and context to modelling social cognitive metacognitive and affective dimensions This requires multidisciplinary research that links theory and technology from artificial intelligence cognitive science and computer science with theory and practice from education and the social sciences **Historisch-meereskundliches Jahrbuch** ,
