

System resetting is necessary when the wheels are changed (for example, a switch to steel discs and tires). After wheels are installed on the newly fitted wheels, have the work performed by a SUBARU dealer following wheel replacement.

It may not be possible to install TRAC select on certain wheels that are on the market. Therefore, if you change the wheels (for example, a switch to steel discs), use wheels that have the same part number as the standard equipment wheels. Without the operational TRAC select, the TRAC will not fully function and the warning light in the instrument panel will illuminate steadily after driving for approximately one minute.

When a tire is replaced, adjustments are necessary to ensure continued correct operation of the tire pressure monitoring system. As with wheel replacement, therefore, you should have the work performed by a SUBARU dealer.

WARNING

If the tire tire pressure warning light does not illuminate briefly after the system switch is turned OFF or the light illuminates steadily after driving,

stop for approximately one minute; you should have your Tire Pressure Monitoring System checked at a SUBARU dealer as soon as possible.

If the light illuminates while driving, never brake suddenly and never driving straight ahead while gradually reducing speed. Then, slowly pull off the road to a safe place. Otherwise, an accident, involving serious vehicle damage and various personal injury could occur.

If the light still illuminates while driving after adjusting the tire pressure, a tire may have significant damage and a flat that causes the tire to lose air rapidly. If you have a flat tire, replace it with a spare tire as soon as possible.

When a spare tire is mounted or a wheel rim is replaced without the original pressure sensor/transmitter being transferred, the low tire pressure warning light will illuminate steadily after driving for approximately one minute. This indicates the TRAC is unable to monitor all four wheel effects. Contact your SUBARU dealer as soon as possible for tire and sensor replacement and/or system resetting. If the light

illuminates steadily after driving for approximately one minute, promptly contact a SUBARU dealer to have the system inspected.

Tire inspection

Check on a daily basis for the tire air flow from serious damage, cuts, and sores. At the same time, check the tire for abnormal wear.

Contact your SUBARU dealer immediately if you find any problem.

NOTE

1. When the wheels and tires strike curbs or are subjected to harsh treatment as when the vehicle is driven on a rough surface, they can suffer damage that cannot be seen with the naked eye. This type of damage does not become evident until time has passed. Try not to drive over curbs, potholes or on other rough surfaces. If doing so is unavoidable, keep the vehicle's speed down to a walking pace or less, and approach the curbs as squarely as possible. Also, make sure the tires are not pressed against the curb when you park the vehicle.

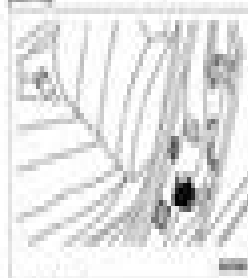

2. If you feel unusual vibration while driving or find it difficult to steer the

(continue)

vehicle in a straight line, one of the tires and/or wheels may be damaged. Stop at the nearest authorized SUBARU dealer and have the vehicle inspected.

Tire pressures and wear

Maintaining the correct tire pressures helps to maintain the best vehicle fuel use and is essential for good handling performance. Check and, if necessary, adjust the pressure of each tire (including the spare) at least once a month, for example, during a fuel stop, and before any long journey.

The placard

Check the tire pressures when the tires are cold (the a pressure gauge is cold).

Use the pressures to the values shown on the tire placard. The tire placard is located on the door pillar on the driver's side.

Driving over a short distance warms up the tires and increases the tire pressures. Also, the tire pressures are affected by the outside temperature. It is best to check the pressure outdoors before driving the vehicle.

When a tire becomes worn, the air inside it expands, causing the tire pressure to increase. Be careful not to repeatedly release air from a worn tire to reduce its pressure.

NOTE

1. The air pressure in a tire increases by approximately 4.0 psi (28 kPa, 0.3 kg/cm²) when the tire becomes warm.
2. The tires are considerably cold when the vehicle has been parked for at least 3 hours or has been driven less than 1 mile (1.6 km).

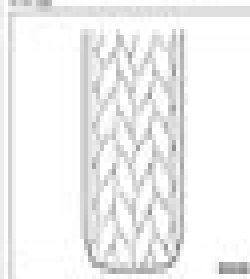

WARNING

Do not let air out of spare tires to adjust pressure. Doing so will result in low tire pressure.

Increase the pressure defect from air.

stability and ride comfort, and they cause the tires to wear abnormally.

1. Correct the pressure (check over-inflation).

Resulting in poor and shortening its lifespan. Excess wear is low, so fuel consumption is also lower.
