Tests and Proofs Catherine Dubois, 2009-06-29 1 This volume contains the research papers and invited papers presented at the Third International Conference on Tests and Proofs TAP 2009 held at ETH Zurich Switzerland during July 2 3 2009 The TAP conference is devoted to the convergence of proofs and tests It combines ideas from both sides for the advancement of software quality To prove the correctness of a program is to demonstrate through impeccable mathematical techniques that it has no bugs to test a program is to run it with the expectation of discovering bugs The two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on any hope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather different techniques and tools And yet the development of both approaches leads to the discovery of common issues and to the realization that each

may need the other The emergence of model checking has been one of the first signs that contradiction may yield to complementarity but in the past few years an increasing number of research efforts have encountered the need for combining proofs and tests dropping earlier dogmatic views of incompatibility and taking instead the best of what each of these software engineering domains has to offer
