Between Human Factors and the Prevention of Disasters David L. Barry, NATO Emerging Security Challenges Division, NATO Advanced Research Workshop on Correlation between Human Factors and the Prevention of Catastrophes, 2012 The nuclear disaster at the Chernobyl power plant devastating floods landslides droughts the erosion of tailings dams and desertification are just some of the natural and manmade disasters which have afflicted the Ukraine and neighboring countries in recent years It is therefore entirely appropriate that the NATO Advanced Research Workshop ARW Correlation between Human Factors and the Prevention of Catastrophes was held in Dnipropetrovsk Ukraine in September 2011 This book presents the proceedings of the ARW which analyzed accumulated European theoretical knowledge and practical experience in the field of disaster prevention addressing a wide range of correlations between human factors and the prevention of catastrophes Subjects covered include land use planning and management procedures risk assessment in emergency situations control of polluted water socio economic impacts from desertification health impacts arising from nuclear facilities flooding and tailings dam accidents risk management systems and measures and the protection of water resources The presentations reflected the extensive experience of workshop participants and will be of great interest especially to countries that are developing their legal frameworks in civil emergency planning most particularly those who are aligning to EU directives and other international standards *Permafrost Soils* Rosa Margesin, 2008-10-31 Most of the Earth's biosphere is characterized by low temperatures Vast areas 20% of the soil ecosystem are permanently frozen or are unfrozen for only a few weeks in summer Permafrost regions occur at high latitudes and also at high elevations a significant part of the global permafrost area is represented by mountains Permafrost soils are of global interest since a significant increase in temperature is predicted for polar regions Global warming will have a great impact on these soils especially in northern regions since they contain large amounts of organic carbon and act as carbon sinks and a temperature increase will result in a release of carbon into the atmosphere Additionally the intensified release of the climate relevant tracer gas methane represents a potential environmental hazard Significant numbers of viable microorganisms including bacteria archaea phototrophic cyanobacteria and green algae fungi and protozoa are present in permafrost and the characteristics of these microorganisms reflect the unique and extreme conditions of the permafrost environment Remarkably these microorganisms have been reported to be metabolically active at subzero temperatures even down to 20 C **ERDA Energy Research Abstracts** United States. Forensic Science Under Siege

Kelly Pyrek, 2010-07-27 Forensic science laboratories reputations have increasingly come under fire. Incidents of tainted evidence, false reports, allegations of negligence, scientifically flawed testimony, or worse yet perjury in court testimony have all served to cast a shadow over the forensic sciences. Instances of each are just a few of the quality-related charges made in the last few years. *Forensic Science Under Siege* is the first book to integrate and explain these problematic trends in forensic science. The issues are timely and are approached from an investigatory yet scholarly and research-driven perspective. Leading experts are consulted and interviewed, including directors of highly visible forensic laboratories as well as medical examiners and coroners who are commandeering the discussions related to these issues. Interviewees include Henry Lee, Richard Saferstein, Cyril Wecht, and many others. The ultimate consequences of all these pressures, as well as the future of forensic science, has yet to be determined. This book examines these challenges while also exploring possible solutions, such as the formation of a forensic science consortium to address specific legislative issues. It is a must-read for all forensic scientists. Provides insight on the current state of forensic science demands and future direction as provided by leading experts in the field. Consolidates the current state of standards and best practices of labs across disciplines. Discusses a controversial topic that must be addressed for political support and financial funding of forensic science to improve.
