**Electronic Communication in Heterometallated Porphyrin Oligomers** Jonathan Cremers, 2020-02-13 This book cuts across the divisions of organic inorganic and physical chemistry It describes new methods for creating conjugated porphyrin oligomers with precisely defined sequences of zinc and copper metal cations and how EPR spectroscopy was used to investigate the dipolar and exchange coupling between the paramagnetic copper II centres Porphyrins are a group of heterocyclic macrocycle organic compounds that play an important role in our everyday life and can for example be found in blood where they form a red complex with iron haem Various metallic elements can be inserted into a porphyrin and changing the coordinated metal is an excellent way to influence the chemical and physical properties of these molecules Focusing on 3 metals zinc magnesium and copper the author established new methods for creating conjugated porphyrin oligomers and lastly presents the synthesis and investigation of two novel porphyrin nanoballs Giving the template directed strategy the author developed for constructing these molecules this work could provide access to other related nano cages

**Tactical Communications for the Digitized Battlefield** Michael J. Ryan, Michael R. Frater, 2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network
