Integrating Discovery-Based Research into the Undergraduate Curriculum National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Division on Earth and Life Studies,Committee for

Convocation on Integrating Discovery-Based Research into the Undergraduate Curriculum, 2016-01-07 Students who participate in scientific research as undergraduates report gaining many benefits from the experience. However undergraduate research done independently under a faculty member's guidance or as part of an internship regardless of its individual benefits is inherently limited in its overall impact. Faculty members and sponsoring companies have limited time and funding to support undergraduate researchers and most institutions have available or have allocated only enough human and financial resources to involve a small fraction of their undergraduates in such experiences. Many more students can be involved as undergraduate researchers if they do scientific research either collectively or individually as part of a regularly scheduled course. Course based research experiences have been shown to provide students with many of the same benefits acquired from a mentored summer research experience assuming that sufficient class time is invested and several different potential advantages. In order to further explore this issue the Division on Earth and Life Studies and the Division of Behavioral and Social Sciences and Education organized a convocation meant to examine the efficacy of engaging large numbers of undergraduate students who are enrolled in traditional academic year courses in the life and related sciences in original research civic engagement around scientific issues and/or intensive study of research methods and scientific publications at both two and four year colleges and universities. Participants explored the benefits and costs of offering students such experiences and the ways that such efforts may both influence and be influenced by issues such as institutional governance, available resources and professional expectations of faculty. Integrating Discovery Based Research into the Undergraduate Curriculum summarizes the presentations and discussions from this event.

Comparative Approaches to Biotechnology Development and Use in Developed and Emerging Nations Bas, Tomas Gabriel, Zhao, Jingyuan, 2016-10-19 The development of biotechnological innovations is quickly becoming a globalized phenomenon as emerging nations are making major strides to compete with more developed economies. Though efforts to bridge the gap between emerging and developed nations have been successful there are still many barriers that need to be overcome.

Comparative Approaches to Biotechnology Development and Use in Developed and Emerging Nations evaluates the importance of manufacturing biotechnological products around the world. Highlighting a comparative analysis of public policies, technological policies, innovations and marketing capabilities of developed and emerging nations this publication is a pivotal reference source for government officers, policy makers, academics and practitioners.
