Gastrointestinal Pathology Geraint T. Williams, 2012-12-06 There have been many advances in the field of gastrointestinal pathology which are of considerable clinical significance during the 13 years since the last publication of a volume of Current Topics in Pathology devoted to this subject Many have arisen from the application of new techniques of histochemistry immunocytochemistry quantitative morphometry and molecular and cell biology to gastrointestinal diseases but some notably the recognition of the association of *Campylobacter pylori* with the commonest type of chronic gastritis have been achieved using such long established routine histological procedures that one wonders how their significance had escaped recognition for so long The topics covered in this volume have been selected because they present advances of relevance to the diagnostic clinical pathologist However they represent the personal selection of the editor and are in no way exhaustive Many other examples of progress in our understanding of the pathophysiology of gastrointestinal diseases have been omitted either because of the confines of space or because they have been well reviewed recently in other publications Most of the workload of the practising gastrointestinal pathologist involves the diagnosis and assessment either of inflammation or of neoplasia in the alimentary tract and this is reflected in the topics presented in this book
