

Changing Beliefs About Implausible Autobiographical Events: A Little Plausibility Goes a Long Way

Three experiments investigated the malleability of perceived plausibility and the subjective likelihood of occurrence of plausible and implausible events among participants who had no recollection of experiencing them. In Experiment 1, a plausibility-enhancing manipulation (reading accounts of the occurrence of events) combined with a personalized suggestion increased the perceived plausibility of the implausible events, as well as participants' ratings of the likelihood that they had experienced it. Plausibility and likelihood ratings were uncorrelated. Subsequent studies showed that the plausibility manipulation alone was sufficient to increase likelihood ratings but only if the accounts that participants read were set in a contemporary context. These data suggest that false autobiographical beliefs can be induced in clinical and forensic contexts even for initially implausible events.

Many studies have shown that people can be led to believe that they experienced events, when in fact, they did not. People have been led to believe that they were born left-handed (Kelley, Amadio, & Lindsay, 1996), that they spilled punch at a wedding (Hyman, Husband & Billings, 1995), that they broke a window with their hand (Garry, Manning, Loftus, & Sherman, 1996; Heaps & Nash, 1999), or that they got lost before age 3 (Mazzoni, Loftus, Seitz, & Lynn, 1999). These and other examples indicate how powerful suggestions can be in terms of making people believe that they had childhood experiences that they probably did not have.

Plausibility and False Memories

It has been argued that there are limits to the types of events or beliefs that can be suggestively implanted, and that only events that are plausible can be implanted in memory (Hyman, Gittstrap, Decker, & Wilkinson, 1998; Hyman & Kleinkecht, 1999; Lindsay & Read, 1994; Penick, Finger, & Hodge, 1997). In support of this hypothesis, Penick et al. (1997) reported successfully implanting a memory of being lost in 15% of participants, but being unable to implant a memory for a less plausible event (receiving a

rectal enema). In a separate experiment (Penick et al., 1997), Jewish and Catholic participants received suggestions that as children, they had participated in Jewish Sabbath and a Catholic Communion. Participants were less susceptible to the suggestion that they had experienced a ritual foreign to their religion, rather than a ritual common to their religion. Only 3 of 29 Catholics (10%), and none of the Jewish participants, fell away to the suggestion that they had participated in a foreign ritual, whereas larger percentages accepted the false suggestion that they had participated in a religion consistent ritual. Thus, the study showed that most participants resisted implausible suggestions.

Studies demonstrating the acceptance of false memory suggestions have been cited as indicative of the process by which false memories may be created in therapeutic and forensic settings (Loftus, 1997; Mazzoni, in press). However, some of the apparent memories created in these settings are for implausible events. People have not only developed memories for such implausible events as satanic ritual participation and alien abduction (Mack, 1994), but also for events that could not possibly be remembered, such as concrete narratives about the day after birth (Spanos, Burgess, Burgess, Samuels, & Blois, 1999). Given the data reported by Penick et al. (1997), how is it that false memories for implausible events can be created? The solution to this dilemma resides in the recognition that the perceived plausibility of an event may not be fixed. We hypothesized that memories of implausible events were implanted in these cases because the specific individuals either (a) already believed that the events were plausible, or (b) were led to believe that those events were plausible. Thus, if an event is seen as more plausible, then this should pave the way for allowing its acceptance as having occurred.

We propose a three-step model for the development of false memories. First, the event must be perceived as plausible. Second, individuals must acquire the autobiographical belief that it is likely

Children as Victims, Witnesses, and Offenders Bette L. Bottoms, Cynthia J. Najdowski, Gail S. Goodman, 2009-08-10 Grounded in the latest clinical and developmental knowledge this book brings together leading authorities to examine the critical issues that arise when children and adolescents become involved in the justice system Chapters explore young people's capacities, competencies and special vulnerabilities as victims, witnesses and defendants Key topics include the reliability of children's abuse disclosures, eyewitness testimony, interviews and confessions, the evolving role of the expert witness, the psychological impact of trauma and of legal involvement factors that shape jurors' perceptions of children and what works in rehabilitating juvenile offenders Policies and practices that are not supported by science are identified and approaches to improving them are discussed

False and Distorted Memories Robert A. Nash, James Ost, 2016-10-04 Our memories shape how we think about the past, how we plan for the future and how we think about ourselves Yet our memories are also constantly being reinvented we often remember our experiences differently from how they truly happened and can even remember experiences that never happened at all *False and Distorted Memories* provides an overview of recent and ongoing developments in the science of false memory World leading researchers unpick questions about flawed recollections discussing issues as varied as the reliability of highly emotional memories why we sometimes begin to remember fictional experiences that we have deliberately fabricated and what happens when we stop believing our memories Each chapter demonstrates how memory science has furthered our understanding of these important questions by exploring theoretical ideas and psychological research methods that underpin their investigations Edited by Robert Nash and James Ost this volume offers an international and up to date perspective on false and distorted memories The volume also draws attention to the broad range of real life contexts in which such distortions might arise and their potential consequences *False and Distorted Memories* illustrates the ease with which memory can be contaminated and the power of the resulting memory errors providing an integral text for researchers and students interested in the psychology of memory

[The Oxford Handbook of the Development of Imagination](#) Marjorie Taylor, 2013-04-02 Children are widely celebrated for their imaginations but developmental research on this topic has often been fragmented or narrowly focused on fantasy However there is growing appreciation for the role that imagination plays in cognitive and emotional development as well as its link with children's understanding of the real world With their imaginations children mentally transcend time, place and circumstance to think about what might have been, plan and anticipate the future, create fictional relationships and worlds and consider alternatives to the actual experiences of their lives *The Oxford Handbook of the Development of Imagination* provides a comprehensive overview of this broad new perspective by bringing together leading researchers whose findings are moving the study of imagination from the margins of mainstream psychology to a central role in current efforts to understand human thought The topics covered include fantasy, reality distinctions, pretend play, magical thinking, narrative

anthropomorphism counterfactual reasoning mental time travel creativity paracosms imaginary companions imagination in non human animals the evolution of imagination autism dissociation and the capacity to derive real life resilience from imaginative experiences Many of the chapters include discussions of the educational clinical and legal implications of the research findings and special attention is given to suggestions for future research

Handbook of Metamemory and Memory John Dunlosky, Robert A. Bjork, 2013-10-18 This Handbook examines the interplay between metamemory and memory Each contributor discusses cutting edge theory and research that in some way showcases the symbiotic relationship between metamemory and memory Together these chapters support a central thesis which is that a complete understanding of either metamemory or memory is not possible without understanding their mutual influence The inspiration for this volume was the life and research of Thomas O Nelson whose pioneering and influential research in the fields of metamemory and memory consistently highlighted their integrated nature

Constructions of Remembering and Metacognition P. Higham, J. Time and Transcendence G. Motzkin, 2012-12-06 This book investigates one aspect of the story of how our religiously oriented culture became a secular one It concentrates on the conflicts enveloping the attitude to the past from the late seventeenth to the early twentieth century The background argument is that the way the process of secularization occurred in one particular religious context the Roman Catholic one was determinative for the possibility of something such as secular culture and hence for both the modern secular attitude to the past and the modern religious one In recent years a spate of scholarship has suggested that the expanded version of Weber's theory according to which modernity is a consequence of Protestantism is not quite accurate Robert Merton modified this theory to argue that modern natural science originated in the context of seventeenth century Protestant England Against this position many scholars have investigated 2 origins for the development of science in Catholic countries The development of natural science however is not the whole story of the development of modern secular culture even if the story of that development is restricted to the development of knowledge Our modern universities are organized around the division between humanities and natural sciences and it can be thought that this process of modernization or secularization affected the humanities no less than the sciences

True and False Recovered Memories Robert F. Belli, 2011-11-18 Beginning in the 1990s the contentious memory wars divided psychologists into two schools of thought that adults recovered memories of childhood abuse were generally true or that they were generally not calling theories therapies professional ethics and survivor credibility into question More recently findings from cognitive psychology and neuroimaging as well as new theoretical constructs are bringing balance if not reconciliation to this polarizing debate Based on presentations at the 2010 Nebraska Symposium on Motivation True and False Recovered Memories Toward a

Structure and the Metaphysics of Mind William Jaworski, 2016 Structure and the Metaphysics of Mind is the first book to show how hylomorphism can be used to solve mind body problems persistent problems understanding how thought feeling perception and other mental phenomena fit into the physical world described by our best science Hylomorphism claims that structure is a basic ontological and explanatory principle Some individuals paradigmatically living things consist of materials that are structured or organized in various ways Those structures are responsible for individuals being the kinds of things they are and having the kinds of powers or capacities they have From a hylomorphic perspective mind body problems are byproducts of a worldview that rejects structure Hylomorphic structure carves out distinctive individuals from the otherwise undifferentiated sea of matter and energy described by our best physics and it confers on those individuals distinctive powers including the powers to think feel and perceive A worldview that rejects hylomorphic structure lacks a basic principle which distinguishes the parts of the physical universe that can think feel and perceive from those that can t and without such a principle the existence of those powers in the physical world can start to look inexplicable and mysterious But if mental phenomena are structural phenomena as hylomorphism claims then they are uncontroversially part of the physical world for on the hylomorphic view structure is uncontroversially part of the physical world Hylomorphism thus provides an elegant way of solving mind body problems
