

How to write a critical review article

S A Hamed Hosseini

Lecturer, School of Humanities and Social Sciences, the University of Newcastle

Version 1.2 (9/05/2014)

A 'critical' literature review is supposed to 'critically examine' a rather solid literary body of arguments/ideas around a particular topic. The literary body of ideas around the topic (i.e. literature) may include theorizations, conceptualizations, and/or explanations based on empirical studies of the topic. Each body of ideas supports at least one thesis about the topic. The critical review can be structured through answering the following questions:

Critical Review Questions (CRQs):

Introduction:

1. What are the very core arguments thesis/theses developed in the literature around the topic? What are their findings (if the literature includes empirical research)? What theories are used or developed? How are the core concepts defined?
2. Where is the given literature located in its wider historical and intellectual/theoretical contexts? It is important not to consider the literature as an isolated body of arguments but rather to consider it in relation to other similar attempts to study the topic from different points of view.

For instance, if the topic is 'social class in the post-modern time', one body of ideas that you may like to focus on as your main theme can be the idea of meta-industrial class/labor as developed by eco-feminist theorist Ariel Salleh. The thesis is that the meta-industrial labor is a new social class that has the capacity to transform the capitalist relations due to some of its specific features. Historically, such a body of ideas around new classes has emerged in the context of post-Marxist, post cold war era as the result of failure of classical theories of class in explaining the recent changes in the class composition of modern societies. Here you need to explain how the idea of meta-industrial class can be related to and/or located in the wider context of recent theoretical attempts to theorize social classes in the post cold war (post-Marxist) era. You may briefly name a few other important theses with some overlaps and differences.

Discussion (Body):

3. To what extent are the arguments and the thesis embedded in them (as presented by the author(s) in the literature) supported by facts/evidence? How selective vs. inclusive are the authors in their approach to empirical evidence? Answering this question requires the reviewer to examine the given body of ideas or thesis in the literature in terms of its ability to back up the

Critical Analysis in Psychology: the Essential Guide to Interrogating Published Research A.J. Shepherd, 2022-10-19 This book is the fruit of Alex Shepherd's remarkable teaching experience in one of the most prestigious universities in the world. This publication will certainly become the main reference for science students at BSc, MSc and PhD levels. Roberto Filippi, PhD, University College London, I highly recommend this book as essential reading for psychology students at all levels from undergraduate to PhD. It provides a friendly and engaging guide to developing critical evaluation skills through the use of clear and accessible examples that capture the reader's interest. Dr Elisa Lewis, Senior Lecturer, London South Bank University. Alex Shepherd offers an accessible forensics of published research articles with helpful guides showing what questions to ask and more importantly what the answers mean. Gina Rippon, Professor Emerita of Cognitive Neuroimaging, Author of *The Gendered Brain*. If something is published, does that mean it's true? Critical Analysis in Experimental Psychology encourages the critical reading and analysis of psychological research reports and shows how design principles and statistics are applied. A.J. Shepherd empowers you to read between the lines of any published study and draw your own conclusions. Using synopses of published research articles as examples, the book shows how to work out if summary claims made by authors or the media accurately reflect an experiment's real findings. Through guided analysis of both quantitative and qualitative real-world research, you will learn to review research articles comprehensively and critically. Understand the rationale, logic and purpose of an article. Identify the hypotheses, whether stated or unstated. Describe and assess the suitability of the research methods used. Analyse the implied interpretation of the results. Become an active rather than a passive reader of scientific articles. This book gives new insight into published research articles, helping you feel less like a student and more like a researcher. The critical skills learned will help you to navigate through the confusing science messages we are exposed to through all types of media. Dr A.J. Shepherd has over 20 years of experience teaching Critical Analysis. She is a Reader in Psychology at Birkbeck University of London, UK, and since 2004 she has run the third-year Critical Analysis course, which she also designed.

Introduction to Research Mark Walsh, Lynne Wiggins, 2003. Focuses on students' needs for their Foundation studies across the healthcare disciplines. This book can be used together as a complete learning tool or individually as a dip-in reference guide. It is pitched at the right level for first-year students or those on Return to Practice courses.

A Critical Evaluation of the Criticisms against Neutrosophic Statistical Methods Muhammad Aslam, Abdulrahman AlAita, Florentin Smarandache. Neutrosophic statistical analysis has gained attention for incorporating the degree of indeterminacy when analyzing imprecise and interval data under uncertainty, an aspect often overlooked by classical statistics, fuzzy statistical analysis and interval statistics. Recently, critical discussions have emerged regarding the use and applications of neutrosophic statistics with some

questioning its usefulness and validity In this paper we present a critical assessment of the existing literature focusing on areas where misunderstandings and misinterpretations of neutrosophic statistical methods have occurred We also examine flawed comparisons made between the results of neutrosophic statistics and interval statistics Furthermore substantial issues have been identified in the current simulation both in its application and in the comparison of results The objective of this paper is to highlight these key concerns and provide clarity for researchers working in this area helping them to better understand the appropriate applications of neutrosophic statistical methods
