Sherbet, 2003-07-24 Genetic recombination is a process of combining genes that leads to the generation of cell variants that possess different characteristics. This process is important to the evolution of a species and to embryonic growth and differentiation However this process can also lead to the development of abnormal cancerous cells This book reviews the role of genetic recombination in the generation of various cancers and how genetic alterations have been or could be employed to elicit clinically useful information Provides detailed discussion of the genetic mechanisms that result in the generation of normal and abnormal cells Examines the role of genetic recombination in cancer including cancer invasion and metastasis Information is presented in a manner that is useful and accessible to everyone from graduate students to established cancer researchers *Introducing CAL* Keith Hudson, 2013-11-11 It is often the case perhaps more often than not that new ideas arrive long before there is the me ans to clothe and deli ver them We can think of Leonardo da Vinci s drawings of helicopters and submarines among many other examples Computer Assisted Learning CAL is an example of an idea which has had a particularly long gestation As I will illustrate early in the book the principles of CAL were really first discovered by Socrates As a formal method of teaching the Socratic method disappeared for over two millennia until the 1950s It was then revived in the form of Programmed Learning PL which resulted from the researches of BF Skinner at Harvard University Even then PL was premature In the 1950s and 60s methods were devised such as teaching machines and various sorts of PL text books and

there was a mushrooming of PL publishing at that time For a complex of reason economic logistical and technical PL also largely disappeared from the mid 60s although it continued in a few specialized areas ofteaching and industrial training However during the same period PL quietly transformed itselfinto CAL But the computerized form was not capable of mass dissemination until recently hecause personal microcomputers did not have sufficient internal memory sizes That situation has now changed very dramatically and 128K microcomputers are becoming cheap and widely available Cheap memory chips of 256K and 1024K cannot be far away either **Anticipation: Learning from the Past** Mihai Nadin, 2015-07-03 This volume presents the work of leading scientists from Russia Georgia Estonia Lithuania Israel and the USA revealing major insights long unknown to the scientific community Without any doubt their work will provide a springboard for further research in anticipation Until recently Robert Rosen Anticipatory Systems and Mihai Nadin MIND Anticipation and Chaos were deemed forerunners in this still new knowledge domain The distinguished neurobiologist Steven Rose pointed to the fact that Soviet neuropsychological theories have not on the whole been well received by Western science These earlier insights as presented in this volume make an important contribution to the foundation of the science of anticipation It is shown that the daring hypotheses and rich experimental evidence produced by Bernstein Beritashvili Ukhtomsky Anokhin and Uznadze among others extend foundational work to aspects of neuroscience physiology motorics education **CELLS** George Plopper, David Sharp, Eric Sikorski, 2013-12-02 The ideal text for undergraduate and graduate students in advanced cell biology courses Extraordinary technological advances in the last century have fundamentally altered the way we ask questions about biology and undergraduate and graduate students must have the necessary tools to investigate the world of the cell The ideal text for students in advanced cell biology courses Lewin's CELLS Third Edition continues to offer a comprehensive rigorous overview of the structure organization growth regulation movements and interactions of cells with an emphasis on eukaryotic cells The text provides students with a solid grounding in the concepts and mechanisms underlying cell structure and function and will leave them with a firm foundation in cell biology as well as a big picture view of the world of the cell Revised and updated to reflect the most recent research in cell biology Lewin s CELLS Third Edition includes expanded chapters on Nuclear Structure and Transport Chromatin and Chromosomes Apoptosis Principles of Cell Signaling The Extracellular Matrix and Cell Adhesion Plant Cell Biology and more All new design features and a chapter by chapter emphasis on key concepts enhance pedagogy and emphasize retention and application of new skills Thorough accessible and essential Lewin s CELLS Third Edition turns a new and sharper lens on the fundamental units of life Preview sample content today Find chapters 6 and 10 under the Samples tab above Contains design features specifically intended to enhance pedagogy including Key Concepts What s Next and Concept and Reasoning Checks Features new more student friendly illustrations Includes Access to a Navigate Companion Website packed with student resources and opportunities for further study included with every new printed copy An Instructor's Media CD is available for adopting insitutions and
