Behavior Philip Thomas Starks,Rachael E. Bonoan,Helen McCreery,2024-08-16 Behavior is the means through which animals interact with the environment and with each other As such behavior must be central to conservation efforts In no example is this more clear than with the large blue butterfly *Phengaris arion* in the United Kingdom failure to understand its life history and species interactions led to its local extinction even with habitat restoration efforts Despite the clear importance of behavior conservation behavior is often under discussed even in situations where the natural history of a species is well understood We propose exploring conservation behavior within insects and doing so with a wide diversity of species and

geographic locations As insects have often served as models to advance theory so they may serve as models to advance conservation Our goals for this collection are three fold First we aim to present the latest in insect behavior research and how such research can be applied to conservation Second we will promote diverse authors from diverse geographic locations Third we will facilitate an educational mentoring experience for early career professionals by enlisting senior professionals to work with their students and or post docs on the publication process from manuscript submission to review to publication
