Tackling Trauma Paul A. Barker, 2019-03-14. Trauma is a universal phenomenon that can be caused by international catastrophes or individual personal tragedy. Trauma is also a severely neglected topic in Christian literature and while it can challenge someone's faith in Christ, God and the ministry of his Word is central to dealing with the emotional and psychological impact of trauma. By his Spirit, through his Word and through his church, God is available to minister to people suffering from trauma and bring transformation to their lives. In this book, a team of experienced and informed Christian professionals from around the world promote a deep biblical response to trauma through clinical and theological wisdom and their first-hand experience of witnessing and experiencing trauma. The contributions provide practical responses to people's trauma rather than mere descriptions of the problems, making it an ideal resource for pastors, counsellors, humanitarian workers and students.

Bridging the Academia Industry Divide Wilson R. Nyemba, Charles Mbohwa, Keith F. Carter, 2021-05-12. This book is the result of years of research following a realization of the mismatch of engineering skills produced by universities and those that industry required based on the situation in Sub-Saharan Africa, equally applicable to other regions in Africa and indeed worldwide. The book is meant to assist engineering academics and engineers in industry to build capacity and cope with the dynamic trends in technology brought on by the 4th Industrial Revolution and to prepare for the 5th Industrial Revolution, an era predicted to be dominated by critical and systems thinkers with creative and innovative skills as basic necessities. The book is also useful for policy-making researchers in academia, industrial and public sector researchers and implementers in governments that provide required funding for the development of human resources and skills. The book primarily consists of the novel research and innovation approaches of modelling and building systems thinking sub-models which were ultimately integrated into the Universal Systems Thinking (UST) model aimed at improving the quality of engineers and engineering practice. The initiatives in this book include strategies for bridging the gap between industry and academia through systems thinking research. The book provides information on how to model, simulate, adjust and implement integrated systems thinking approaches to engineering education and training for capacity building and sustainability. The book also covers approaches to address research gaps and
