Virtual Reality and Augmented Reality Bruno Arnaldi, Pascal Guitton, Guillaume Moreau, 2018-03-15 Virtual and Augmented Reality have existed for a long time but were stuck to the research world or to some large manufacturing companies With the appearance of low cost devices it is expected a number of new applications including for the general audience This book aims at making a statement about those novelties as well as distinguishing them from the complexes challenges they raise by proposing real use cases replacing those recent evolutions through the VR AR dynamic and by providing some perspective for the years to come

Basics of Virtual Reality Armin Grasnack, 2022-01-04 Today the reality we know can be recorded and reproduced true to reality using technical processes Space and time are recreated virtually as a copy in artificial reality However the reproduction of virtual reality is not limited to a mere copy of what exists A visitor to the virtual space does not have to be content with the pixelated image of the old familiar but can encounter unreal phenomena in the illusory world that never existed in real life or are even physically impossible This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things But a perspective is also the observation of a scene from a viewing position From different perspectives the illusion of reality arises during the reproduction by observation This vision is not based on imagination or hallucination but is the basic function of virtual reality This book describes the concepts systems and technologies used to create virtual reality from its ancient beginnings to the present and provides a glimpse into a possible future This book is a translation of the original

German 1st edition Grundlagen der virtuellen Realität by Armin Grashnick published by Springer Verlag GmbH Germany part of Springer Nature in 2020 The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors

The Re-Emergence of Virtual Reality Leighton Evans, 2018-10-26 In this short book Evans interrogates the implications of VR's re-emergence into the media mainstream critiquing the notion of a VR revolution by analysing the development and ownership of VR companies while also exploring the possibilities of immersion in VR and the importance of immersion in the interest and ownership of VR enterprises He assesses how the ideologies and desires of both computer programmers and major Silicon Valley industries may influence how VR worlds are conceived and experienced by users while also exploring the mechanisms that create the immersive experience that underpins interest in the medium

Where are you? Self- and body part localization using virtual reality setups Albert van der Veer ,2019-09-19 This volume presents a line of original experimental studies on the bodily self investigating where people locate themselves in their bodies and how accurate they are at localizing their body parts So far it was not well known whether people locate themselves in one or more specific regions of their bodies On the other hand some systematic distortions in indicating bodily locations were already documented In the present studies participants were therefore asked to indicate their self locations as well as the locations of several of their body parts using a self directed first person perspective pointing paradigm in various virtual reality VR setups different head mounted displays and a large screen immersive display Overall participants were found to locate themselves mainly in the upper face and the upper torso However striking differences in self localization were found when testing in different VR setups Upon further investigation these differences were found to be foremost due to inaccuracies in body part localization When taking these inaccuracies into account differences between setups and also with self localization outside of VR largely disappear Another striking finding was that providing participants in between pointing phases with information about their bodies in the form of a real time animated self avatar did not make them more accurate at locating their own body parts While manipulating their viewpoint to chest height of their self avatar did shift the afterwards indicated locations of their own body parts upwards towards where they were seen on the avatar Potential explanations for the various new findings also from tasks outside of VR are discussed Taken together this volume suggests a differential involvement of multi sensory information processing in experienced self location within the body and the ability to locate body parts Self localization seems to be less flexible possibly because it is strongly grounded in the bodily senses while body part localization appears more adaptable to the manipulation of sensory stimuli at least in the visual modality **Nicky Hockly's 50 Essentials for Using Learning Technologies** Nicky Hockly,2022 In this accessible book Nicky Hockly draws on her extensive personal experience along with relevant research and theory to provide practical guidance on the effective implementation of learning technologies in language teaching The book explores key issues including the implication of these technologies on pedagogy the use of technology in different teaching and learning scenarios digital evaluation and assessment and how teachers can use technology for their own professional learning **Handbook on 3D3C Platforms**

Jerusalem in Memory and Eschatology Emma O'Donnell Polyakov, 2025-06-12 Investigating a range of eschatological ideologies this volume explores the connection between notions of sacred space and time in Jewish Christian and Muslim understandings of Jerusalem The recognition of Jerusalem as a holy city both unites and divides Judaism Christianity and Islam While these three religious traditions share a reverence for the same ancient city this veneration leads more often to tension and violence than to commonality and cooperation Each of these religions draws heavily from religious memory and eschatological prophecies and sees Jerusalem as a site of past and future upheaval however the distinctions in their visions imbue Jerusalem with meanings that reinforce conflicting and contested ideologies Offering multiple analyses of religious interpretations of the city and its sacred sites this volume explores these divergent visions of the remembered and anticipated Jerusalem
